Respond® 3 is a premium wetting agent for improving water penetration and treating localized dry spot, compaction and drought stress. For use on golf courses, sports turf, etc. Available in liquid and granular formulations.

**Formulation:**
Neutral blend of polyhydroxyethyl alkoxy alkylene oxides .......................................................... 100%

**BENEFITS**
- Respond 3 provides superior penetration, excellent lateral movement and long residual with extreme turf safety.
- Respond 3 has been widely tested in Europe and at the University of Georgia.

**Application Information:**
**LIQUID** — Sand-Based Mixes and Native Sandy Soils: Corrective Program: 4 oz. per 1,000 sq. ft. followed by 4 oz. per 1,000 sq. ft. every 14 days thereafter. Maintenance Program: 4-6 oz. per 1,000 sq. ft. every 30 days.

**LIQUID** — Heavy, Non-Sandy Soils: Corrective Program: 4 oz. per 1,000 sq. ft. followed by 4 oz. per 1,000 sq. ft. every 14 days thereafter. Maintenance Program: 2-4 oz. per 1,000 sq. ft. every 30 days.

**GRANULAR** — Managed Application Program: 1.5 lb. per 1,000 sq. ft.; 2 applications at 14 day intervals in early season followed by 1 lb. per 1,000 sq. ft. monthly as needed. Intensive Split Dose Application Program: A 3 lbs. per 1,000 sq. ft. early season application followed by 1.5-3 lbs. per 1,000 sq. ft. mid-season application.

**CURATIVE** — Application Program: 1.5 lb. per 1,000 sq. ft. as necessary, repeat at 10-14 day intervals.

**Respond® 3 Tablets** provide a premium wetting agent for improving water penetration and treating localized dry spot, compaction and droughted stress. For use on golf courses, sports turf, etc.

**Formulation**
Neutral blend of polyhydroxyethyl alkoxy alkylene oxides .......................................................... 100%

**BENEFITS**
- Respond 3 Tablets provide superior penetration, excellent lateral movement and long residual with extreme turf safety.
- 100% active provides flexible application methods (preventative program or for curative purposes/season-long control) and makes it more economical to use.

**Application Information:**
Respond 3 Tablets are specifically designed for spot treatment of severely affected areas through the proper hose-end applicators. The Respond 3 Tablet is inserted into the applicator vessel of the hose-end device and as water pours over the tablet, it slowly dissolves. Rate of dissolution will depend upon water pressure and water temperature. One tablet should be enough to cover one golf green in 20-30 minutes, or alternatively, spot treat 6 to 7 golf greens.

Mizer® is a premium, non-ionic wetting agent for improving water penetration into the soil profile, optimizing water usage and conserving water loss through evaporation. This product is specifically designed to go through irrigation systems on large turf areas and nurseries or conventional equipment on smaller areas like home lawns/landscapes.

**Formulation**
Neutral blend of polyhydroxyethyl alkoxy alkylene oxides and alkylpolyoxyethylene ........................................ 25%

**BENEFITS**
- Mizer contains all the benefits of Laminar Flow Technology: Superior penetration, excellent lateral movement and long residual with extreme turf safety.
- Mizer has 25% active ingredients meaning it can be applied at a reduced rate and cost per acre.
- The addition of a linear polymer results in Mizer acting as a flocculent in the soil by opening it up and increasing water and air movement. It also helps flush salts from the soil and gets soil-active pesticides deeper into the profile and distributed more uniformly.

**Application Information:**
**Maintenance Dose:** 16 to 24 ounces / acre
**Maximum Dose:** 32 ounces / acre

**Spray Application:** 0.37 to 0.73 ounces / 1,000 square feet every 21 to 30 days or as needed.
