

# String of Pearls

*Curio rowleyanus*

- I'm a crowd favorite among houseplants! I grow small, bright green 'pearls' along cascading stems, and I'll even bloom small white flowers in the summer.
- I don't need much care at all, just a sunny windowsill and water once or twice a month.
- To propagate me, prune off a 4" stem and place it in moist cactus soil. I'll root and start growing new pearls in no time!
