

# Octopus Agave

*Agave vilmoriniana*

- I'm a beautiful, slow-growing succulent that grows long, gray-green leaves. When they start curving, they're said to resemble octopus tentacles.
- I'm the perfect 'set it and forget it' plant; set me in a spot where I'll get a day's worth of partial to full sun and I'll be happy!
- I only need water once a month.
- Keep me out of reach of curious kids or pets, as my sap is dangerous and should not be touched or ingested.
