

String of Bananas

Senecio radicans

- I'm a brightly colored, fast-growing succulent with vines that can grow up to 3 feet long!
- My green, banana-shaped leaves are slightly translucent and will propagate easily if they fall off the vine.
- I appreciate very dry soil and lots of sunlight, and once a year (springtime is best) I could use a light fertilizing.
- I can live outside in the summer, and when it gets cold enough to frost in the fall, move me back inside.
