

THE UCLA PTSD REACTION INDEX FOR DSM-5©

The **UCLA PTSD Reaction Index for DSM-5** (Child/Adolescent, Parent/Caregiver, and 6 and Younger versions) are the next generation of the UCLA PTSD Reaction Index for DSM-IV. The DSM-5 versions provide a format for making a comprehensive evaluation of trauma history and trauma-specific details, an assessment of the full range of DSM-5 posttraumatic stress symptoms, and disturbances in behavior, functioning, and development. Translations in Spanish, Simplified Chinese, Malay, Japanese, and German are currently available, with additional translations underway. The Reaction Index is supported by a training video for administration and scoring at: <https://youtu.be/sYuKdnnsqf8>. The Reaction Index is licensed for use through **Behavioral Health Innovations** at: www.reactionindex.com.

- **Scoring software** uses an algorithm to generate a PDF that can be printed and saved in an electronic medical record.
- An easy to read **symptom severity profile** helps clinicians with case conceptualization and treatment planning.
- **Colors assigned to each symptom** allow for efficient determination of symptom presence and severity.
- The PDF also indicates whether criteria for PTSD and Dissociative Subtype are met.
- The **data entry and analyses software** is designed for a Windows operating system.

File Analysis

UCLA PTSD REACTION INDEX FOR CHILDREN AND ADOLESCENTS - DSM-5 Version

Child/Adolescent Name: _____ ID # _____ Age: _____ Sex: Girl Boy

Grade in School: _____ School: _____ Teacher: _____ City/State: _____
