

# Project Overview

Data is the most valuable digital resource on the planet but much of it remains unused and locked away. Ocean helps to unlock the data to drive AI.

Estimates show that a \$2-5 Trillion Data Economy could be created if organizations and people would have the tools to guarantee control, privacy, & security.

Ocean Protocol is an ecosystem for the Data Economy. It exposes data, storage, compute and algorithms for consumption with a set of deterministic proofs on availability and integrity that serve as verifiable and provable service agreements that people can trust.

Ocean Protocol provides the base layer for value exchange and brings compute alongside data so that the data remains safe, secure and private
