SPECIFICATION

Oatey MODA™ washing machine outlet boxes shall be used in residential or commercial applications requiring supply valves and a waste drain recessed in the wall. The MODA™ washing machine assembly contains a valve box and a drain box, connected by inter-locking wing flanges that can be easily disassembled and re-assembled. Box shall be manufactured of PVC, allowing solvent welded joints to be prepared in accordance with ASTM D2855 for PVC drainage systems (without the use of specialty cements). The inter-locking wing flanges shall allow installation on a single stud, between two studs or on separate walls, without the need for additional components. Valves shall be a two-piece design, permitting field replacement, and shall be secured with a stainless steel retention clip. Valves are available with or without water hammer arrestors and shall be installed upright or inverted. The assembly shall include a removable quarter-turn knock out plug for DWV testing, and shall include an emergency drain port for added protection from hose leaks.
