No-Hub Corrugated Couplings

For Polypropylene and PVDF Chemical Waste Systems

Overview

Orion No-Hub couplings are reliable, economical, and easy-to-install in chemical drainage applications. They require standard torquing tools to tighten, plus a manual pipe-grooving tool to prepare cut pipe ends for joining. The simplified design and installation method makes Orion No-Hub couplings ideal for under-counter assembly. If piping system additions or modifications are anticipated, the No-Hub design allows for easy disassembly and reconfiguration. The strength and security of our corrugated stainless steel outer band combined with the chemical resistance and no wetted metal surfaces of the inner coupling body result in a joining system that is durable, versatile, and economical to install.

Features

- Creates strong, tight, and reconfigurable joints in chemical waste drainage applications.
- The one-piece design of the stainless-steel outer shell offers easier and faster installation.
- The ribbing design of the outer shell provides consistent compression on the inner liner for more reliable performance.
- Available in 1 1/2", 2", 3", 4", and 6" sizes and pre-grooved at factory.
- No-Hub mechanical joint method requires torquing to 60 in-lb.
- Used to join Blueline FRPP, Brownline & Plenum Plus PVDF pipe and fittings.

6" PVDF Coupling

2" Polypropylene Coupling

NOTICE

The information contained herein is not intended to replace the full product installation and safety information available or the experience of a trained product installer. You are required to thoroughly read all installation instructions and product safety information before beginning the installation of this product.
