

### Commercial expansion tank

The FlexTank series of ASME expansion tanks are designed to control the pressure in a heating or cooling system, especially in systems with large variations of static pressure and the pre-set pressure relief valve.

The pre-charged tank, with its full acceptance removable bladder and bladder status indicator, is instrumental in helping prevent corrosion and water logging issues in the system.

- Closed loop hydronic heating
- Hydronic cooling
- Heat transfer
- Water / Glycol mixtures up to 50%

#### Features

- Bladder status indicator
- Replaceable heavy duty butyl bladder
- Easily accessible air valve
- Factory pre-charged & field adjustable
- Design pressure of 150 psi
- Max rated temperature of 240°F
- Secure & protective rubber guard for gauge & bladder indicator

**10 - 3,963 Gallons**

**ASME Certified,  
Full Acceptance,  
Expansion Tanks**
