

Public Space, Private Feel

Public Restrooms Brochure

Sleek and Modern

Now you can bring that look to public spaces with Geberit products designed specifically for use in public restrooms. Geberit brings modern design into the public restroom by letting you replace traditional public fixtures with sleek, modern toilets and urinals. Read on to discover the many advantages of using the Geberit System in public spaces. And prepare to be inspired.

Unmatched Flexibility

Geberit allows you more options to create a private bathroom space with a character all its own.

The Geberit Duofix Carrier opens up dramatic design possibilities, taking the toilet off the floor while offering the convenience of hands-free flushing.

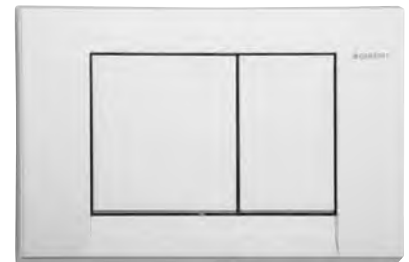

Integrating a Geberit Carrier with standard commercial building practices is effortless. Safely hidden behind the wall, Geberit's in-wall technology creates clean lines, maintaining the unique beauty of your restroom design from floor to ceiling.

The Geberit System gives you the freedom to create an individual style with installation flexibility. After installation, you'll find that maintaining the Geberit System couldn't be simpler. Easy access to all internal components — including the fill and flush valves — through the actuator flush panel resolves maintenance issues quickly, minimizing disruption and downtime, a key consideration in public spaces.

Concerned about water conservation and sustainability? The Geberit Duofix Carrier offers water-saving dual-flush technology, and you can achieve even greater water savings with the 0.5 gpf (1.9 LPF) Geberit Urinal System. Our electronic actuators require very little power to operate and include many other features that can help you minimize power consumption.

Simple Beauty

Geberit's minimalist approach lets the beauty of the restroom design shine through.

Choose from a range of toilet and urinal actuators that feature elegant simplicity and robust, reliable operation.

In semi-public spaces like an office building or a doctor's office, Geberit manual actuators offer water-saving dual-flush capability. This gives users complete control over water consumption, where appropriate.

For public spaces like a restaurant or department store, or wherever hygiene is a paramount concern, the Geberit System now accommodates hands-free flushing with electronic actuation. An infrared beam instantly detects the presence of a user and automatically flushes the toilet when the user steps away. Reliable distance detection registers the user regardless of clothing and lighting, allowing shorter — and therefore space-saving — distances to adjacent urinals and walls. The flush can even be adjusted to suit individual restroom requirements.

Geberit electronic actuators offer additional features that promote hygiene in public restrooms. The automatic trap-filling function prevents stubborn odor problems that can occur if the trap is siphoned empty. An automatic hygiene flush, pre-programmed to occur at 24-hour intervals, prevents stagnation in the toilet and pipes.

Whether you select manual or electronic actuation, "in the wall" does not mean "out of reach." The fill and flush valves and the supply stop are hidden from sight. These components are easily accessible, however, through the actuator flush panel for tool-free maintenance.

Benefits of Geberit in Public Spaces

When you specify Geberit for your public spaces, you'll discover the real-world benefits of our Installation System.

Geberit Installation Systems keep the unsightly out of sight. Safely hidden behind the wall, Geberit's Duofix Carriers allow unique beauty from floor to ceiling. Simple, elegant flush actuators are designed to mix well with any decor, from playful to serene.

→ Design Flexibility

Enclosing the tank in the wall also opens up space in the restroom, making it an ideal choice for confined spaces. The adjustable-height carrier allows you to position the toilet 15" to 19" off the floor and the urinal 17" to 24" off the floor to meet ADA requirements or personal preference.

→ Hygiene

Electronic actuation automatically flushes the fixture after each use, eliminating the need to touch the unit. Because the toilet and urinal are lifted off the floor, maintenance personnel can easily clean and thoroughly disinfect the entire restroom.

→ Water Savings

Geberit puts sustainability at your fingertips, bringing real water savings through 0.5 gpf (1.9 LPF) for urinals or 0.8 gpf or 1.6 gpf dual-flush technology for toilets.

→ Strength and Stability

The Geberit Duofix Carrier supports up to 880 lbs. for toilets (110 lbs. for urinals), exceeding ASME A112.6.2 strength requirements.

→ Easy Maintenance

The Geberit System offers easy access to all internal components, including the fill and flush valves, through decorative actuator flush panels. No tools are needed for simple change-outs.

Urinal

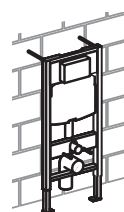

Installing Geberit carriers is easy. They require a 2"x6" wood frame or metal frame construction. The studs must be placed 19 3/4" apart (clearance) where the carrier will be positioned inside a wall. Frame to wall anchors are available for pre-wall installations.

Geberit North America is part of the Geberit Group, a European market leader and global provider of sanitary technology. Located in Des Plaines, Illinois, Geberit North America provides concealed tank and carrier systems for wall-hung and floor-mounted toilets and fixtures. Geberit Systems improve the look of any bathroom by hiding the unsightly toilet tank. Replacing a standard tank and toilet with the Geberit System results in more usable space, improved hygiene and better accessibility. The unique dual-flush valve saves water and is practically maintenance free. Monolith is Geberit's newest product – a unique alternative to the traditional floor-mounted toilet and tank. Geberit also offers cable-controlled bath waste and overflows in a variety of designer finishes. Critical working parts are outside the waterway, ensuring years of trouble-free operation.
