⚠ NOTE

Combustion air connection may be moved from one side to the other:

- Remove the retaining clip screws then lift tab at back of plug and rotate 1/8th of a turn counter-clockwise to remove from top of cabinet.
- Remove the retaining clip by removing both screws then lift tab at back of combustion air connection and rotate 1/8th of a turn counter-clockwise to remove from top of cabinet.
- Reinstall plug and combustion air connection in the desired locations then rotate 1/8th of a turn clockwise until tab latches into the top of the cabinet.
- Reinstall the retaining clip over the combustion air connection tab and secure with two screws. Reinstall two screws in the top of the cabinet near the plug.
