The new Model -MS Monitoring Switch is an optional feature that is available at the time of order with any CALIFORNIA valve. This unique device relays an electrical signal that enables the valve's position (open or closed) to be monitored remotely. The Monitoring Switch is operated via a custom magnet attached to the valves swing-arm, and is capable of handling both AC and DC voltages. It is mounted by the factory, and has been tested and rated for outdoor use. The Enclosure is fabricated from Anodized Aluminum, with all Stainless Steel hardware, and a UL Approved gasket.
