

Pine Crest School use Kano's Story Mode and apps to teach computer programming concepts and critical thinking.

What do you gain most from Kano?

The support we receive from Kano is unlike any other edu-provider. In addition to the resources and lesson ideas, we regularly Skype into their London HQ and meet the team - the kids find it very exciting!

What's been your favourite experience with Kano?

Make Art is a fantastic app that promotes kids' ingenuity. In addition to kids coding our school logo, I decided to use Make Art to develop kids' American patriotism by getting kids to code the American flag. The ability for kids to develop their coding skills as well as their understanding of our country's history is inspiring.

How have kids responded?

They love being collaborative but also competitive with their creations. It fosters both a great sense of community, pride and healthy(!) competitive spirit!

How does Kano support computer science education?

How I get my students involved and engaged

is through ensuring they see how they are applying their computer science education - we use Kano to teach coding languages, key terms and foundations. When kids progress through school, they feel confident from their experience with Kano and can choose CS classes they once thought they would never access.

♥ Love for Kano ♥

I'm able to teach Python, Linux, Javascript and Coffee Script in a way that's accessible, engaging and exciting.
