How To: SET PERMISSIONS ON AN ANDROID DEVICE

When you install an app it may require certain 'permissions' to function properly and Palm-Tech is no exception. The Palm-Tech app requires 'permission' to your Photos and your Camera so that you can take pictures in the app and have them added directly to reports.

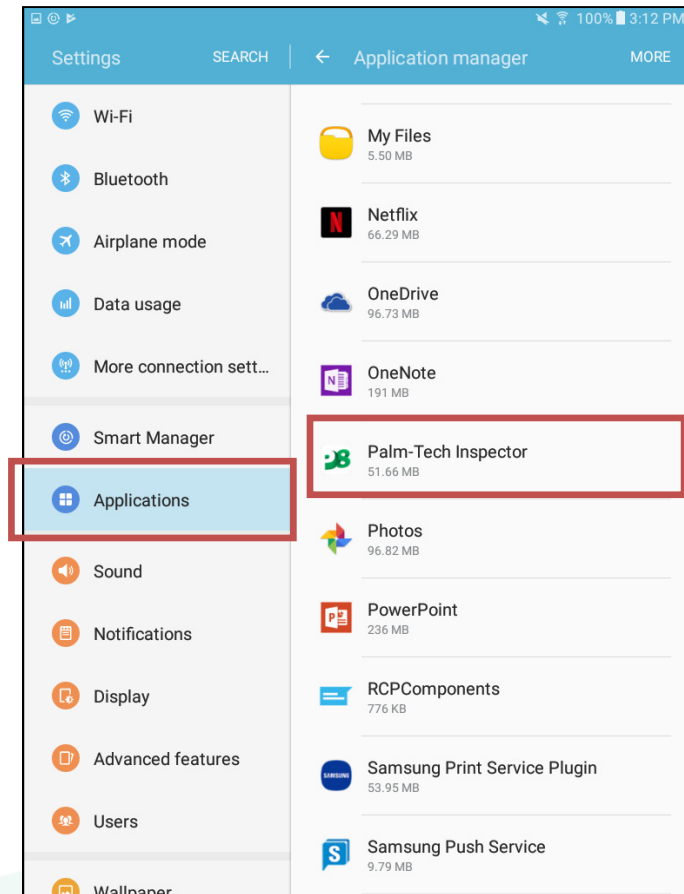

How you access permissions for an app varies based on the device you are on. The steps below may not be the exact way your device works, but they should give you a good path to follow that will allow you to get to the right spot.

1. First, open the 'Settings' app on your device.
