How To: USE COMPLETENESS CHECKS

Palm-Tech has several built-in tools that make it easy for you to review your inspection once it is complete. Completeness checks is one of the tools available and will list every line item in the open inspection that is not completely filled out.

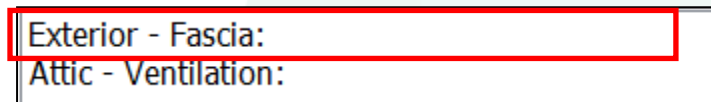

1. With an inspection open, the first step is to click 'Review Inspection' tab in the lower left corner.

2. This brings up the 'Review' tab. On this tab, click on 'Completeness Check'.

3. You will now see a listing of every item that is not complete. To fill out an item, double click on it and it will take you to that section of the report.

4. Once you fill out the line to make it complete go back to the 'Review' tab. As you can now see Fascia has been removed from the list since it has been filled out.

5. You can continue filling out information until every item has been entered. There may be times when you want to leave items incomplete and that is OK.
