Subject: Please support FX.25 and the latest revision of AX.25

I own three TM-D710A radios and an TH-D72A. I am very happy with their performance and recommend them to others. I encourage you to update the TNC firmware to support both the latest revisions to the AX.25 protocol and the FX.25 error-corrected protocol. Both of the major soundcard TNCs (Direwolf and Soundmodem) support these, and having support in your products would be a great way to remain relevant. As you may know, Winlink has been adopted as a core tool by ARES units around the world.

Thanks. Mike KQ9P
