

Notes

Re : Kit Assembly for Mast Climbing.

This is the arrangement to achieve. Make reference to the course notes to decide if using external rope (up & down outside mast, with end attached to harness, and ascender/Grigri attached to the other rope fall) or internal rope (up to mast head and made off at mast base). :-

Connect Ascender

Ascender on rope above, with karabiner connecting quad. Option to install a pulley into the karabiner

Option to feed fall rope up from Grigri through pulley on Ascender and down to hand

Grigri fed onto climbing rope and then attached to harness. Ensure that the "climber" markings are pointing "UP"

Set up a safety line. Either a spare halyard onto the harness with a "tailer" on a winch, or an independent halyard, tight to the deck, with a fall arrest rope grab running up and down.

Connect Descender
