In the last two decades, we have witnessed the increasing complexity of and demands to our health and education systems. Information and technology systems serve as innovative and accessible tools, effective in reaching people at the “last mile,”—those information consumers who live and work in remote areas and experience barriers to accessing information on healthcare and education services. The need for digital tools and the information they provide has only increased in the era of COVID-19, with restrictions on travel and group gatherings.

It is in this context that USAID’s Health and Education Policy Plus (HEP+) project partners with Guatemalan stakeholders like the Ministry of Health and Social Assistance (MSPAS) and Office of Human Rights (PDH) to increase information sharing through digital platforms. This webinar will feature three data dashboards that monitor health and education indicators in Guatemala: one for Guatemala’s National Contraceptive Security Commission (CNA) and two for the country’s Office of Human Rights. Join us to hear from HEP+, MSPAS, and PDH representatives Márgareth Espinoza, Karem Morales, and Claudia Maselli about the HEP+ tool development methodology and the impact of creating digital solutions for health and education systems.

Suneeta Sharma
Project Director,
HP+/Palladium

Andrés Bravo Navarro
Information System
Manager, HEP+/Palladium

Márgareth Espinoza
Technology Projects Coordinator,
