

ELANTAS Europe GmbH presents its new or further developed screen printing inks at the IDTechEx Show!

At this year's IDTechEx Show! ELANTAS Europe GmbH presents its new or further developed screen printing inks: Bectron CP 6662 VP, a highly conductive ( $< 0.010 \Omega/\text{sp}/\text{mil}$ ) silver ink for the printing of fine lines and thin films. Bectron CP 6671 VP, a conductive ( $< 0.035 \Omega/\text{sp}/\text{mil}$ ) UV-curable silver ink, 100% VOC-free. Bectron CP 6680 VP, a conductive ( $< 0.025 \Omega/\text{sp}/\text{mil}$ ) thermoformable silver ink especially for in-mold electronics, which shows good results after deformation and molding. Bectron CP 9580 VP, a conductive ( $< 45 \Omega/\text{sp}/\text{mil}$ ) thermoformable carbon ink, which improves the properties of the thermoformable silver ink Bectron CP 6680 VP if this was overprinted with this ink.
