

Acellent Technologies, Inc is a global leader in the field of Structural Health Monitoring and Management (SHM) with more than two decades of experience in providing innovative IIOT solutions for our clients. We design and manufacture our SMART Layer Technology based SHM systems to monitor the health condition of structures ranging from aircraft, spacecraft and rotor-craft to pipelines, bridges, wind turbines, automobiles etc. Our products are able to translate the condition of aging, degrading, and failing structures to an easy to understand metric with a user friendly interface. Welcome to the age of Smarter Structures!

On November 14th and 15th, Acellent will showcase our state-of-the-art SHM systems at IDTechEx Show! in Santa Clara Convention Center. There will be live demonstration with our latest systems, including our passive impact detection system and active ultrasonic scanning systems with the capability of informing the operator in real-time the damage location, size and the magnitude of impact in the structure. For more information and to see live demonstrations of our systems, please visit us at our booth #R40.
