

SAG has forged itself as the synonym of quality RFID transponders. Our product portfolio spans from Card, Keyfob, Tag, Label to NFC sensor-enabled items. We also create transponders for unique and specialized purposes, namely IoT and Industry 4.0. We prove ourselves in Access Control, Healthcare, Automation, Logistic, Industrial, Entertainment, and NFC sectors. Since Sept. 2017, SAG has become a member of RAIN® RFID alliance and committed to advocate the RAIN technology to accelerate UHF RFID growth and universal adoption. Meanwhile, we also join NFC Forum to target the booming NFC applications. We are your one-roof store for RFID transponders.

In this year's debut at IDTech Expo, SAG will showcase some new products which bring our know-how and production capability together. Tags that provide longer reading distance, offer hands-free solutions, or outperform in a challenging environment are the centerpiece on display at SAG booth in this year. We push the reading capability of RAIN RFID Overmolded Uni Metal Tag to a new boundary which greatly benefits asset and logistics management. A newly developed RAIN RFID Disposable Wristband sees no read range drop when placed near human body, making hands-free gateway passing possible. Coming to the NFC technology, cable tie tag helps fasten a loose object while providing an ID number to assist asset management, item tracking, and material workflow control. It can be applied on a metallic surface or items in irregular shape – a viable product solution to be verified in many ways.

We will be glad to meet you at IDTech Expo with our booth # T39 – the AIM Pavilion on Nov. 14 to 15.
