Kiel, Germany – The smart apparel company, Vulpés Electronics GmbH, plans to exhibit the current products, technology and provide insights into future development of smart clothing items at the IDTechEx Show, booth A11, on April 10th – 11th 2019 at Estrel Convention Center, Berlin, Germany.

Vulpés has successfully launched smart heated products such as insoles, gloves and hats in Europe and Japan. The company focuses on interoperability, digitalization of clothing items and connectivity with and to smartphones. The Vulpés IoT Platform allows easily to connect company's own and 3rd party smart clothing items and wearable devices.

The primarily goal of smart apparel is to improve health and safety, enhance well-being and comfort and simplify human's operation with the environment. Either for the leisure time, sport activities, professional work or therapeutically treatment Vulpés supports the user with suitable equipment providing value-add features.
