

Jenax to Reveal How Ultra-Flexible Batteries Unlock Smart Product Innovation at IDTechEx Berlin

Jenax's Revolutionary Battery, J.Flex (Revolutionary J.Flex Battery), Enables Freedom of Design in Wearables, IoT and Medical Devices

Busan, South Korea – March 21, 2019 – [Jenax](#), inventor of flexible, fast-charging lithium-ion rechargeable batteries, has been invited to be a [featured speaker at IDTechEx](#), taking place April 10-11, 2019 in Berlin, Germany. The company's managing director, EJ Shin, will discuss how the unmatched flexibility, power and safety of the J.Flex battery can unlock the next generation of high-performance wearables, tech fashion, user-friendly medical devices and other IoT-connected products. Attendees can also see J.Flex in action, in a wearable demonstration that powers portable electronics on the go, at Booth L08.

“Wearable designers, IoT innovators and medical device manufacturers have amazing ideas for smart, life-altering products. But they're held back by clunky, rigid batteries that limit their options. To bring their ideas to fruition, they need a rechargeable, supremely flexible battery like J.Flex—which can be bent and even scrunched like paper while maintaining its power and integrity,” said Shin. “I'm excited to show IDTechEx attendees how J.Flex can uniquely fuel next-generation smart products.”

Shin will be presenting “From Battery Constraints to Freedom of Design Innovation in Wearables” on April 10, 2019 at 2:20pm in the [Estrel Convention Center Exhibition Theater](#). IDTechEx attendees are also encouraged to visit Jenax's booth L08 to learn more about J.Flex's capabilities and see it in a wearable demo.

About Jenax

Jenax Inc. (KOSDAQ: 065620) pioneered and manufactures J.Flex – an ultra-flexible, fast-charging, high-performance lithium-ion rechargeable battery. Jenax partners with manufacturers of medical devices, apparel, electronics, and more to design completely customized and safe battery solutions in diverse sizes and shapes. Its broad applications include IoT, wearables, medical devices, and sensors. Founded in 1991, Jenax is based in Busan, South Korea. Visit www.jenaxinc.com for more details.
