PREPARING THE OVEN (A ONE-TIME PROCESS)

In order to remove any protective substances on the heating elements, it is necessary to preheat the oven for 5 minutes. Once the oven is well heated, you can begin cooking.

1. Place the Levine on a flat, dry surface. Ensure there is 4" of clear space on both sides of the appliance. There are no doors to close, so the oven can be used immediately.

2. Turn on the oven and set the power plug into a wall outlet.

3. The oven will sound and the LCD screen will illuminate. The function options will appear with an icon on the LED screen. (Timer Function).

4. Turn the FUNCTION dial to the right until the indicator reaches the desired function. The oven will now begin its preheating process.

5. The oven is now ready to use.

OPERATING YOUR BREVILLE SMART OVEN

The Breville Smart Oven™ features Element-iQ™, a cooking technology that adjusts the power of the heating elements to cook food more evenly and quickly. Each of the oven’s functions is preset with recommended settings. However, we suggest experimenting with these depending on the recipe, amount of food, and your personal taste. Your custom settings will remain in the memory of the oven until changed or the oven is unplugged from the wall outlet.

1. Insert the wire rack into the maximum rack position. These are conveniently positioned on the right side of the oven’s glass window. The wire rack should be positioned with the strike facing the oven.

2. Turn on the oven and set the power plug into a wall outlet.

3. The temperature on the LCD screen indicates the current cooking temperature. The oven will beep when the strike is reached, and the oven will start to cook.

4. The buttons on the LCD screen indicate the current cooking time on the right side of the oven. To increase the temperature, press the button to increase the temperature.

5. The oven is now ready to use.
