

Autoimmunity is a key component in several diseases of the nervous system. For reasons, still under research, the body attacks its own self and causes injury along with other components of the immune system like cytokines leading to disease. Neural specific autoantibodies have been documented and their utility validated in several studies, the Neural Zoomer is the most comprehensive compilation of these studies enabling early risk detection and prevention of neural degeneration.

The intended use of Neural Zoomer is to motivate the user to improve lifestyle choices to enhance health outcomes. For chronic diseases or conditions associated with the neural system, it is well understood that proper lifestyle choices may help improve quality of life and reduce symptom risk.

What is tested?

A comprehensive set of autoimmunity markers, from a single serum draw, to provide you with your neurological risks:

Demyelination Antigens

- Anti Tubulin IgM/IgG+IgA
- Anti Myelin basic protein IgM/IgG+IgA

Blood brain barrier disruption

- Anti s100b IgM/IgG+IgA

Optical and Autonomous Nervous System Disorders

- Anti Neuron specific enolase IgM/IgG+IgA

Peripheral Neuropathy

- Anti GM1 IgM/IgG+IgA
- Anti GM2 IgM/IgG+IgA

Brain Autoimmunity

- Anti HSV1 IgM/IgG+IgA
- Anti Cerebellum IgM/IgG+IgA
- Anti Purkinje cell IgM/IgG+IgA

What is Neural Zoomer?

Neural Zoomer is an array of neurological proteins which offers very specific antibody-to-antigen recognition. The Vibrant Wellness Neural Zoomer is designed to assess an individual's reactivity to neurological antigens.

The intended use of Neural Zoomer is to motivate the user to improve lifestyle choices to enhance health outcomes. For chronic diseases or conditions associated with the neural system, it is well understood that proper lifestyle choices may help improve quality of life and reduce symptom risk.

Why use Neural Zoomer?

Neural Zoomer aims to reduce the prevalence of neurological conditions by empowering patients and physicians with a vital resource for early risk detection and an enhanced focus on personalized primary prevention. Autoimmune disorders affect 5-10% of the general population, and often involve central and peripheral nervous system. Symptoms associated with autoimmunity in the nervous system include:

- Ataxia
- Sensory loss
- Neuropathic Pain
- Impaired vision
- Photosensitivity
- Muscle pains/spasms
- Muscle weakness/atrophy
- Orthostatic hypotension
- Chronic pain/Fibromyalgia
- Memory loss or Brain Fog
- Autoimmune disease

If you suffer from any of the above issues but you remain undiagnosed, you may benefit from the **Vibrant Wellness Neural Zoomer**.
