1. Shut off water at main source.
Turn on shower to relieve any water pressure from lines.
2. Install the **Single/Double Dolphin** after the **water regulator**.
3. After installing the **Single/Double Dolphin**, system needs to be flushed into the drain or yard before connecting it to the home.
(flush until the water comes out clear.)
4. Connect the **Single/Double Dolphin** to the **main water line** that leads into the home.
5. Turn on water at the **main SLOWLY** and plug in the power to the **valve timers**.
6. Check for leaks.
7. Set the time on **timers**.
8. Set **Regeneration (Backwash) Cycle Programs** to the recommended 2-3 times a week for at least 15 minutes.
(For further information on this, go to page 13 of the Dolphin Manual.)

- Both systems have built in bypass valves to make media changes easy
- Replace media every 3-4 years
