Age Range: $1^{\text {st }}$ Grade +
Number of players: 1 or 2
Learning: add, subtract, multiply and divide with numbers up to 6
You will need:

- Cut out color shapes on the Easter Egg Splat game (optional).
- 2 Dice
- Some Counters (optional)

## Instructions:

- You can either play this game using counters and covering up the number you make with a counter. Alternatively, start with the blank egg board, and cover the parts of the board up with the cut-out colored egg parts as you complete them.
- Each player has their own egg to complete.
- Take turns to throw the dice.
- Use the numbers on the dice and your,,$+- x$ and $\div$ skills to make the numbers on one of the uncovered part of the egg. Example, if you roll a 1 and a 4 , you could make $5(4+1)$, a $3(4-1)$, or a $4(4 \times 1)$.
- Cover the egg-part up with one of your counters (alternatively cover it up with a colored part of egg with the number written on it).
- If you can't make a number on one of the uncovered egg-parts, you give the dice to the next player.
- The game finished when one player finishes covering up their egg.

## Variations:

- Play the game with more players by printing off more game sheets.
- Each player can complete any part of any egg which is unfilled. When the last counter is placed, the winner is the player with the most counters on the eggs.
