Anatomy laboratory review course designed to supplement medical, graduate, or advanced undergraduate anatomy courses studying the human form through cadaveric study.

5 Modules, 20 Lectures
Over 200 images
The screens provided in this review course feature over 200 cadaveric images from Mark Nielsen at the University of Utah. Each screen contains one or more photographs side by side with the award winning digital 3D model.

High Resolution
The high resolution cadaveric photographs portray in beautiful detail the anatomical structures and features of the skeletal and muscular systems of the human body.

Customized Labels
The model portrayed in each screen has been customized and labeled to represent the same anatomical structures and views as represented in the photographic images.

Strengthen Your Understanding
The purpose of this course material is to strengthen a student’s understanding of anatomical relationships both in and out of class.
