

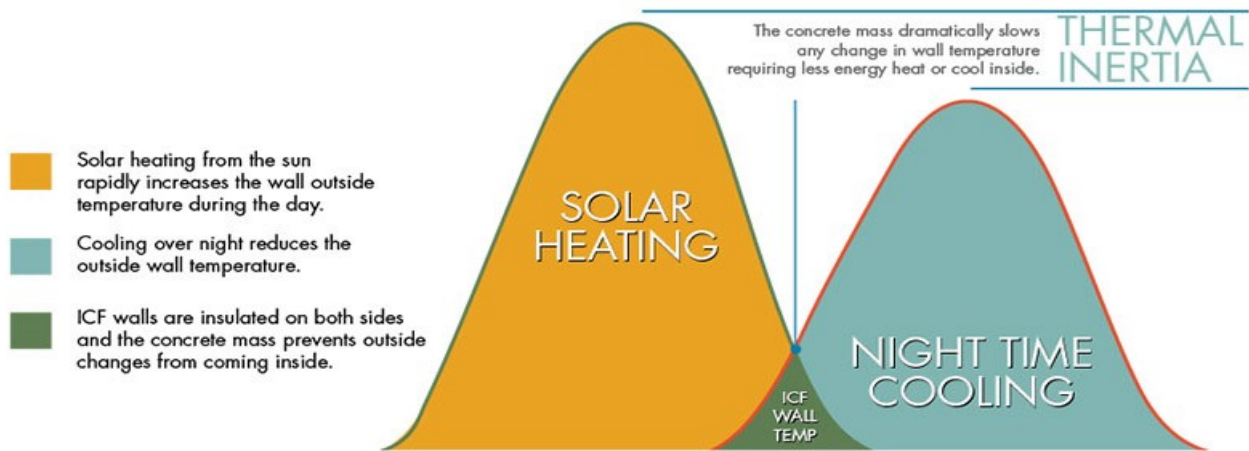

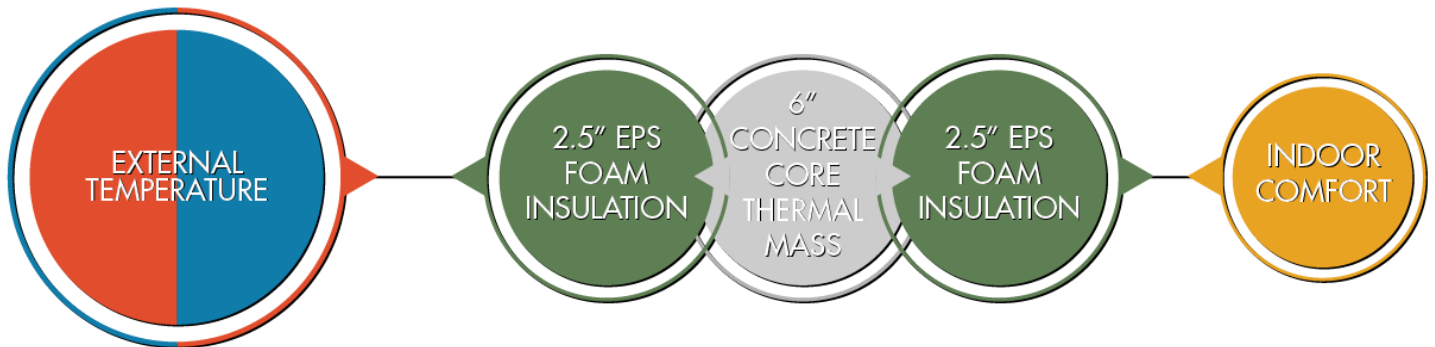

Graphics gathered from several sources that illustrate (top half) how “thermal mass” works

This

ICFs consistently deliver more than 60% utility savings every month.

60%

ENERGY SAVINGS

estimate is about total energy savings by

- stopping All convection (no leaks)
- limiting conduction, (R factor in walls nearly doubled)
- and a lot via “thermal mass” above

(ICF = Insulated Concrete Formed) walls

Note all of these savings are passive.....and forever.
