

Operations First, Accounting Second.

Decimal is focused on providing our clients with best in class Operational Accounting. This means that we take an operations first approach to your bookkeeping, bill pay, payroll, and back office operations. Traditional bookkeepers rely on accounting principles and only focus on logging transactions. They aren’t focused on streamlining or automating tasks. Creating friction and a lack of accuracy and responsiveness for their clients.

At Decimal we believe that technology aligned to clients’ specific needs, operational knowledge and processes, and a team of tenured experts enable us to provide the highest level of accuracy and responsiveness in the industry.
