

Your Data Team has arrived.

Entirely dedicated to Snowflake,
we leverage our long-standing expertise
to deliver projects in the data cloud.

Your data transformation starts here:

Infostrux resolves organizational data challenges by combining our extensive data engineering and analytics experience in building cloud-native solutions with our deep understanding of Snowflake to assist organizations in their data-centric transformation.

Get at the forefront of Snowflake- driven innovation

Our production experience with innovative Snowflake use cases like Data Clean Rooms and Snowpark allows our R&D team to align perfectly with Snowflake's specialized practices. As a result, we keep developing a repository of reference architectures and accelerators for more advanced Snowflake use cases.

Bring value to your Business.

Our engagement methodology focuses on tailoring your Data Cloud Journey to prioritize the outcomes that will swiftly enhance your business. We empower you to rapidly embrace inventive Snowflake use cases through strategic accelerators, driving tangible value to your overall business performance.

Data Strategy & Architecture

We provide expert advice on data management strategy covering modern data governance, metadata management, data quality, architecture, and modeling. We also help with business-specific data strategy, following the latest trends in your industry.

Data Science

Implement advanced data science use cases and get more value from your data. We build end-to-end data science solutions that cover everything from data extraction to model development, deployment, and operations—Turnkey or deep collaboration, your choice.

Data Engineering

Implement modern data analytics solutions or migrate your legacy ones. We use best-in-class data architecture, data engineering and modeling methodologies, and automation to guarantee reliability, quality, and efficiency.

Data Sharing and Governance

We focus on Data Governance to drive business innovation. Our expertise lies in streamlining data management, ensuring its security, governance, and accessibility. We create a unified source of truth, enabling advanced analytics and AI applications. This approach drives informed decision-making and strategic business growth.

Data Apps

Make your data more accessible and usable while enabling data monetization use cases through the Snowflake marketplace. We build state-of-the-art data apps following the latest technologies available for the Snowflake Data Cloud.
