

re—venue

optimising opportunity

Transforming booking data into revenue growth

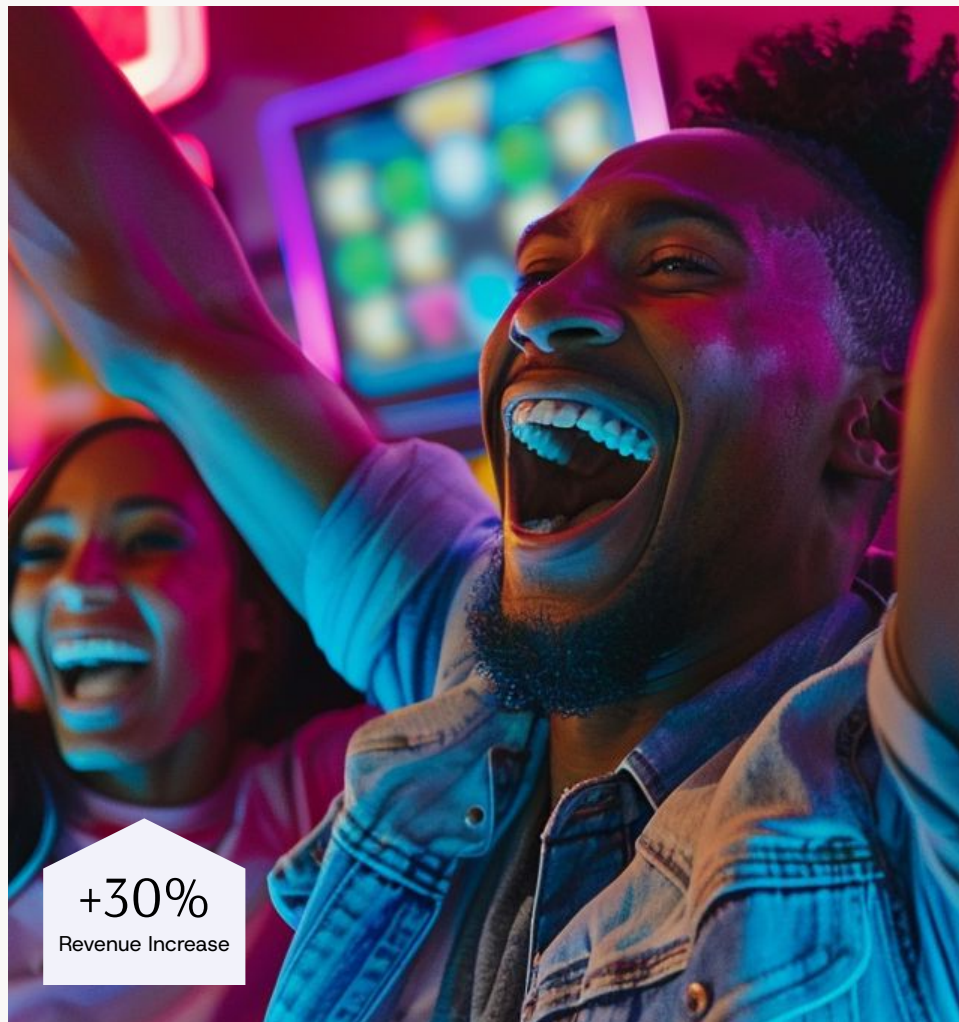

Re-venue is an AI-powered analytics platform that turns booking interactions into maximum yield. Our Demand Index operating system automatically optimises every time slot for revenue—without changing your booking system.

Venues using Re-venue are capturing **15–30% more revenue**. Every month without optimisation is revenue you're missing.

re—venue

What is Demand Index?

Re-venue is AI yield optimisation for booking-based venues. One score per time slot. Automatic tools to hit the optimal revenue target. It's that simple.

- Above 10? You're leaving money on the table.
- Below 10? You need more bookings.

Your team continues using familiar tools whilst gaining enterprise-level revenue optimisation with Re-venue

Demand Index analyses your utilisation, pricing, booking momentum, weather data and external factors. It then automatically deploys the right tools—dynamic pricing, restriction rules, upsells, nudges, to guide every slot towards that optimal score of 10.

Capture revenue you're currently missing

Your existing platform takes bookings efficiently but doesn't optimise value. Most systems process reservations rather than maximise yield. Re-venue identifies peak periods where customers would pay more, underutilised slots needing targeted pricing, and low-value bookings occupying premium time.

Data-driven instead of guesswork

Move from reactive pricing decisions to proactive, systematic optimisation. Re-venue processes multiple data streams to identify patterns and opportunities that manual analysis would miss, continuously learning and improving as your business evolves.

Transparent ROI tracking

See exactly how optimisation improves your bottom line. Track financial improvements from each strategy, monitor capacity performance across all periods, and project revenue impact before implementing changes. Complete transparency enables continuous refinement based on actual results.

Fast implementation, immediate impact

Seamless integration preserves your existing workflows whilst adding sophisticated optimisation. No system replacement. No operational disruption. Customer experience remains unchanged. Start seeing measurable revenue increases within weeks.

Proven results across venues

Integration with leading platforms.

Toca Social +1.5M

Enhanced booking journey that simplified user experience whilst increasing conversions. Seamless extras and clear pricing reduced drop-offs significantly.

Additional revenue generated over 15 months for one venue. **Platform:** SevenRooms
