Cybersecurity Services

CHALLENGING
THE
ORDINARY

Helping customers overcome the challenges of keeping their confidential information secure and their business uninterrupted from cybersecurity threats is the core of UNIQUELY. Our main goal is to improve your readiness for real-life cyber threats and offer expertise in mitigating and responding to them.

Security Management

Develop & Implement a complete Information Security program in compliance with most renown Security & Privacy frameworks and regulations

Offensive Security

Test your security perimeter on vulnerabilities and weaknesses that can be exploited by cyber criminals, and ensure you are shipping your digital products without security vulnerabilities

Defensive Security

Effectively integrate and manage cybersecurity technologies and utilize our next-gen 24/7 Security Operations Center into your business, train your employees on cybersec practices and protect what matters

vCISO Advisory Services

Virtual CISO is a service designed to make top-tier security experts available to organizations who need security expertise and guidance. Our team of experts has decades of experience; building information security programs that work WITH business objectives and show measurable improvement to security posture.

Framework Specific Implementation

Regardless of the business location or market, security frameworks are accepted world-wide. We build security programs considering ALL of the following frameworks: NIST, ISO27k, SOC2, HITRUST, CCPA, GDPR

Governance and Risk Management

Ensures your governance and policy framework defines the necessary security controls, values and cultural aspects to set the tone for how security is lived at the organization tracking and effectively mitigating information security risks.

Audit Readiness Testing

Get the sanity check on how your organization is prepared for a specific external audit or certification audit - NIST, ISO27k, SOC2, HITRUST, CCPA, GDPR

Penetration Testing

We assign a minimum of two pen testers to every project to ensure high quality. Exceed the OWASP Top 10 criteria in your review of whether a hacker could gain access to the network or your data by testing Web Applications, APIs, Mobile Apps, Network and Cloud infrastructure. Leverage our dedicated team of industry certified and experienced testers with rigorous quality control of identified threats. Either in a planned and scope penetration test or a full-blown Red Team Simulation, our team gets to the bottom of the perimeter security posture.

Red Team and Adversary Simulation

A red team assessment considers a broader scope and greater reward – identifying gaps in the detection and response capabilities of the entire organization. Combines contextual analysis of business logic and threats to create actionable attack scenarios using manual testing techniques with support of automated tools, social engineering techniques and advanced attacks.

Actionable Reporting

Actionable Reporting Validate controls and improve security posture based on recommendations and guidance and rated findings.

Unlimited Retests

Ensure your actioned remediations are validated by our team once more to confirm correct implementation of recommendations. Our package always includes unlimited retests for 12 months after the issue of the original report.

Defensive Security

Security Systems Implementation

Elite cyber engineering combined with security expertise and partner technologies ensures that your IT infrastructure perimeter is well defined, secured and monitored through high-tech security technology implementation.

DevSecOps Team Augmentation

Assist development and DevOps teams in implementing an effective and automated DevSecOps pipeline in the development process ensuring high standard cloud security controls and architecture. The review consists of code scanning using security-focused static analysis tools together with man-powered expertise to perform manual code review

SOCaaS - Security Monitoring & Incident Management

Through our Security Operations Center as a Service, with latest SIEM and SOAR technologies, we deliver 24x7 real-time monitoring, correlation and expert analysis of your environment, using our counter threat methodology and partner technology to eliminate false positives and detect valid threats. Optional complete managed incident response.

Security Configuration Management and Training

Ensure your current technology landscape is properly configured and secure avoiding out-of-the-box default settings and accounts, unsecure protocol support and ensuring standardized best practice configuration. UNIQUELY's Workshops are a unique blend of theory and applied skills development, all built around the most popular cybersecurity frameworks worldwide. Our team includes experienced cybersecurity penetration testers, security developers, and industry professionals. The UNIQUELY Secure Coding Workshop is designed to educate web application developers with the best practices and skills for secure code development.

Secure Development

CHALLENGING
THE
ORDINARY

Security Development Lifecycle

Early in the project phase, UNIQUELY advises customers by building security in every element of the project with activities such as the definition of the security requirements and objectives, design review, threat modelling, source code analysis, penetration test at each major release, fuzz testing, secure programming guidance, and more. These activities aim to reduce the attack surface offered by the project and its systems, strengthening its confidentiality, integrity, and availability. This reduces the chances for fraud and future maintenance costs to correct defects originating from security flaws.

Security Source Code Review

The review consists of code scanning using security-focused static analysis tools together with man-powered expertise to perform manual code review to identify vulnerabilities and design errors that can pose a severe risk to the application.

Secure Coding Training

UNIQUELY's Workshops are a unique blend of theory and applied skills development, all built around the most popular cybersecurity frameworks worldwide. Our team includes experienced cybersecurity penetration testers, security developers, and industry professionals. The UNIQUELY Secure Coding Workshop is designed to educate web application developers with the best practices and skills for secure code development.

Leverage Top 7% Talent

UNIQUELY team averages 7+ years per member, bringing over 47 decades of collective software engineering experience, developing complex projects across industries and markets, bringing maximum impact for our client's business.
