crossmint

Embedded Wallets

White-label stablecoin wallets for your users, deployed inside your app.

Embedded Wallets are Crossmint smart contract wallets designed for fintechs to give users access to receive, hold, and send stablecoins without ever leaving their app, or even knowing a wallet is there.

Crossmint APIs are built to be chain-agnostic and accessible to developers without blockchain expertise, so deploying wallets can be done in a matter of minutes and scaled to millions of users.

Trusted By Global Fintechs & Crypto Firms

MoneyGram · Western Union · VISA · TALA · wirex

Key Capabilities

- **Easy wallet creation**. Server or client-side, via REST API or SDKs.
- **Invisible to your users**. No seed phrases, no gas, no extension.
- **Gas sponsorship by default**. Hide gas fees from users.
- **Account recovery handled**. Email, phone, passkeys, and more.
- **Compliance integrated**. KYT/AML screening automatically.

Why Crossmint is Unique

Bring your own auth
Use Auth0, Stytch, or your own system natively.

Switchable custody
Custodial or non-custodial options, changeable anytime.

No vendor lock-in
Switch providers or migrate in-house seamlessly without friction.

Security enforced onchain
In-contract spend limits, multi-sig, and reliable recovery.

Natively integrated
Instant access to on/offramps, payment cards, and cash rails.
