AFRICA TECHNOLOGY

NIGERIA AS A GLOBAL TALENT HQ

AI-powered creation, a verified digital workforce, and low-friction cross-border settlement — one identity rail across [fatech.app](#), [wallet.fatech.app](#) and [seeq.cloud](#).

Minutes	Segment	Owner
00-10	Part 1 · Nigeria as Global Talent HQ	foundafrica.tech
10-22	Part 2 · Democratising creation — live Lovable build	Live demo
22-34	Part 3 · Cross-border friction and the settlement pipeline	wallet.fatech.app
34-48	Part 4 · How Digital Officers earn	fatech.app · seeq.cloud
48-62	Part 5 · Ecosystem in action — multi-app demos	fatech / seeq / wallet
62-75	Part 6 · Q&A, next steps and onboarding CTA	All

The talent is world class. The plumbing was the problem.

International companies do not struggle to find Nigerian talent. They struggle to pay Nigerian talent. Multi-day settlement, unpredictable FX spreads and gateway restrictions are a payments problem, not a skills problem.

Talent

Verified, trained and identity-checked Digital Officers, not anonymous profiles.

Tooling

AI builders remove the wait for third-party developers entirely.

Settlement

Value clears into local Naira accounts instead of stalling offshore.

FOUND exists to remove both frictions at once — one identity rail, one gateway, one payment pipeline.

Three artificial ceilings

- **1 · FX and remittance friction**

Wires to Nigeria clear in days, not minutes. The spread is invisible until the money lands, and fees stack per hop — a \$40 freelance invoice loses a painful share of its value in transit.

- **2 · Third-party developer dependency**

Founders and creators rent their product pipeline. You raise, you wait, you pay, you wait again — and the idea ages while the invoice clears.

- **3 · Fragmented work and monetisation rails**

No single place to be verified, to be hired, to be scored, and to be paid. Every step lives with a different intermediary, and the worker carries all of the risk.

Remove all three and Nigeria is not competing for work — it is hosting it.

One identity rail, four layers

Layer	Platform	What it does
Parent ecosystem	foundafrica.tech	Identity rail, governance, treasury, partnerships
Workforce gateway	fatech.app	Learn-to-earn, verification, Digital Officer identity, referral tree
Financial pipeline	wallet.fatech.app	USD stablecoin receiving and holding, instant NGN clearing, micro-payouts
Proprietary demand	seeq.cloud · alum · abod square	Owned apps that pay Digital Officers lifetime cash-out income

One member record, one FOUND ID, three surfaces. Sign in once; the ecosystem knows who you are.

FOUND Africa Technology Empowerment Foundation

A registered Nigerian nonprofit building workforce infrastructure — not a marketplace experiment.

RC 7347268

CAC Incorporated Trustee (FATEF). CPN registered and NDPC compliant.

NJFP host

Host organisation for the Nigeria Jubilee Fellows Programme since 2023.

200+ fellows

Hosted through national programmes and placed into structured work.

5,000+ youth

Mobilised through FOUND community and outreach programmes.

D.O.P.E.

Digital Officer Programme for Employability — the training spine.

Red Cup Project

Community initiative under the foundation's social mandate.

Every claim on this slide is a matter of public record. Nothing here is projected.

DEMO #1

Build it live on Lovable

One sentence prompt · first render · one refinement · publish · open the live URL on a phone. No sprint, no invoice, no waiting on a developer's calendar.

YOUR TURN

Type one sentence in the chat describing the app you want to exist. One sentence only. I will pick two and build them live before we finish today.

Fallback: "Generation is warming up — here is one I built this morning from a single sentence."

You own the product, not a retainer

- **Prompt to production in minutes**

An idea becomes a working, deployed product in plain English — the same way every FOUND surface shown today was built.

- **No agency dependency**

Refinement is a sentence, not a change request. Iteration cost drops to almost nothing, so you can afford to be wrong quickly.

- **Plug straight into FOUND rails**

Your front-end connects to the identity rail, the verified officer pool and the settlement pipeline instead of you rebuilding all three.

Everything I am about to show you across FOUND was built this way.

Cross-border payment friction

FOUND

Days

International wires to Nigeria clear in days, not minutes.

Hidden FX

The spread is quoted where nobody sees it until the money lands.

Stacked fees

Bank and gateway fees compound per hop. Small payments are hit hardest.

Reversal risk

Gateways restrict or reverse payouts, so the worker absorbs the loss.

A \$40 invoice should not be a negotiation with the banking system.

Automated USDC-to-NGN pipeline

Step	What happens
1 · Receive	Foreign entities pay in USD stablecoin (Circle USDC) on Layer-2 rails — instant, low-cost clearing instead of correspondent banking hops.
2 · Hold or convert	Members choose: hold USDC, or convert. No trading app, no seed phrase — Web2 sign-in over programmable embedded wallets.
3 · Settle locally	FOUND settles directly into local Nigerian Naira bank accounts, so value is retained inside the local banking system.
4 · Pay out	Micro-payouts are viable, so trial stipends and single-share bonuses can actually reach a member.

Learning is only worth something if the money can reach you, in your bank, today, without a haircut.

Circle and Paystack rails

Circle

USDC as the settlement asset over Layer-2 networks
— the instant, low-cost leg of the journey.

Paystack

Local NGN settlement plus card and bank collection —
the leg that touches the member's account.

This is the part that makes everything else real.

Two currencies. Do not mix them up.

Learning points

Earned by learning and community activity. They stay inside the app: they rank you on leaderboards, unlock badges and fund pitches. They do not cash out.

Earnable cash-out points

Earned by doing paid work through the platform. They sit in the earnings ledger and are payable to you — to NGN, or held as USDC.

Presentation rate across both: 1,000 points = \$1.00

The separation is deliberate and enforced in the ledger, not just in the copy.

In-app only: leaderboards, badges, pitches

How you earn it	Points	Cadence
Verify one course credential	100	Repeatable · 192 verifiable courses live
Verify your account (identity)	1,000	Once
Create or join a sibling network	1,000	Once
Ask a forum question and moderate it 24h	1,000	Once
Get your profile to 100%	1,000	Once
Your first verified referral	1,000	Once
Every further block of 10 verified referees	1,000	Repeatable — lifetime referral growth
Regiment bonus	1,000	Per regiment award

Five one-off milestones = 5,000 points (\$5) on day one. Full catalogue = 19,200 points (\$19.20).

Payable to you — the earnings ledger

How you earn it	Points	Notes
Completed trial day	50	Base daily stipend
Trial day at top marks, all tasks delivered	100	Performance stipend
Trial converts into a paid role	1,000	Once per conversion
Paid project payment	Variable	Per brief, agreed up front
Social Boost — one verified share	100	Max one per platform per day
seeq.cloud subscription referral	10% recurring	For as long as the customer pays
Payout	Debit row	Withdrawal to NGN, or held as USDC

Social Boost across LinkedIn, X and Facebook is up to 300 points (\$0.30) a day for work you were doing anyway.

The demand side of the same ledger

Stream	Price	Referral cut	Post-cut waterfall
Digital Employer Badge	\$50 flat	10% = \$5.00	90% impact pool / 9% operations / 1% treasury vault
Learning Credits (sponsorship)	\$10 – \$100,000	1%	90 / 9 / 1 on the remainder

- **Sponsoring one officer through the entire catalogue costs \$19.20**

192 courses × 100 points ÷ 1,000. The price is derived from the live catalogue, not hardcoded — add a course and the rate moves on its own.

- **An unREFERRED badge purchase still pays its \$5 commission**

It routes to treasury attribution rather than disappearing, so the waterfall always balances.

Third-party app owners become Digital Employers: hire from the verified pool, pay through the same rails.

The first live FOUND-owned app

One printed QR code, re-pointable at any time. Every scan is logged with time, coarse location, device and referrer. Destinations include a web link, a contact card, a social deep link, plus Instant Forms and hosted pages on paid tiers.

- **Officer identity is the sign-in**

A @foundafrica.tech sign-in creates the officer profile and referral code automatically.

- **Referral binding is permanent**

It lasts for the life of the referred account. Unattributed signups fall to the house account.

- **10% recurring commission on every verified payment**

Monthly or annual, for as long as the customer pays. Commission rows are written server-side from verified payments only — nothing self-reported. Third-party partners get a one-off 10% on first payment.

fatech.app is the workforce · seeq.cloud is the demand · wallet.fatech.app is the settlement.

What a referred account is worth

Plan	List price	Officer 10%	At 10 accounts	At 50 accounts
Pro — monthly	\$15 / month	\$1.50 / month	\$15.00	\$75.00
Pro — annual	\$100 / year	\$10.00 / year	\$100.00	\$500.00
Merchant Pro — monthly	\$25 / month	\$2.50 / month	\$25.00	\$125.00
Merchant Pro — annual	\$250 / year	\$25.00 / year	\$250.00	\$1,250.00

ILLUSTRATIVE ARITHMETIC — NOT A PERFORMANCE CLAIM

These columns simply multiply the published 10% commission by an account count. They are not a forecast, a guarantee, or a report of anyone's current earnings.

Recurring means recurring: the commission repeats for as long as that customer keeps paying.

Queried from the live database

Metric	Value
Member profiles (test/ghost accounts excluded)	464
Identity-verified members	48
Verified course credentials issued	271
Bonus milestones credited	59
Courses in the catalogue	193 (192 verifiable)
Countries represented in profiles	1 (Nigeria)

DO NOT IMPROVISE THESE TWO

“Officers trained”, placement rate and salary uplift are not derivable from the database. Cumulative cash-out volume nets to zero today (4,000 points credited, 4,000 paid out). Use the rails-ready line instead.

“The rail is live and tested end to end. What we are scaling now is the number of people standing on it.”

DEMO #2

The ecosystem in action

Three surfaces, one identity, back to back: workforce, demand, settlement.

Fallback for each demo: show the completed run from this morning rather than waiting on a live one.

ORDER OF PLAY**1 · fatech.app**

Catalogue, credential verification, points ticking up, referral tree.

2 · seeq.cloud

Scan to Instant Form, captured lead, narrative themes, officer commission row.

3 · wallet.fatech.app

Receive, hold, convert, cash out to a Nigerian bank account.

AUDIENCE TASK

Complete the webinar task on your dashboard, then set up your wallet profile. I will watch the numbers move.

THE WHOLE THING IN ONE LINE

Build rapidly with AI. Earn on fatech.app. Get paid globally.

Three products, one identity. The workforce is verified, the demand is owned, and the settlement rail is live and tested end to end.

Anticipated question — “Is this crypto?” → It is a settlement rail. You receive USD stablecoin and it lands as Naira in your bank.

DO THESE THREE THINGS TODAY

Your next 15 minutes

1 • Learn and earn

fatech.app — register or log in and claim your webinar onboarding points.

2 • Get paid

wallet.fatech.app — set up your wallet profile so your earnings have somewhere to land.

3 • Build

Start on Lovable, then plug into FOUND. Employing people? The \$50 Digital Employer Badge gets you a verified employer network and the officer pool.

See the whole picture: fatech.app/ecosystem

Officers pay nothing. Employers pay \$50 for the badge.

PRE-FLIGHT HANDOFF CHECKLIST

What each builder must have ready

Builder	Ready state before we go live
foundafrica.tech	Narrative slides final; NJFP and foundation figures confirmed; credibility block signed off.
fatech.app	Member (not admin) demo account signed in; courses tab open; an accomplishment URL on the clipboard; earnings endpoints responsive.
wallet.fatech.app	Wallet profile exists; small test balance available; bank account linked; the exact amounts to show written down.
seeq.cloud	Demo tenant pre-loaded with an Instant Form and voice-to-text; one completed analysis ready to open; @foundafrica.tech attribution verified.

SCREEN HYGIENE

No admin panels. No other members' personal data. No secrets or environment variables. Notifications muted. One browser profile only.

Timings assume each demo opens in a tab that is already loaded.
