crossmint

Crossmint Platform Overview

Crossmint is an all-in-one infrastructure for fintechs and enterprises to deploy stablecoin rails. The platform offers a suite of products delivered through simple APIs that abstract away the complexities of blockchain, compliance, and banking.

All the Components You Need to Launch Stablecoin Rails

Wallets

Embedded Wallets — Give users white-labeled wallets inside your app to receive, hold and transfer stablecoins.

Treasury Wallets — Manage company digital assets and orchestrate payments.

Onramps & Offramps

Embedded On/Offramps — Let users fund and withdraw directly inside your app using familiar payment methods.

Treasury On/Offramps — Convert company funds between fiat and stablecoins.

Stablecoin Orchestration

Payins & Payouts — Send and receive stablecoins across 170+ countries.

Virtual Accounts — Give companies dedicated accounts to fund wallets by bank transfer, converting to stablecoins on arrival.

Cards & Yield

Stablecoin Cards — Let users spend stablecoin balances through Visa or Mastercard (offered via partnerships).

Yield Protocol Integrations — Offer yield opportunities via integrations to protocols like Morpho.

Agentic Payments

Agent Wallets — Give AI agents non-custodial stablecoin wallets to make programmable payments.

Agent Cards — Issue virtual Visa or Mastercards for agents to transact with user-defined controls.

Forward Deployment Integration Support

Crossmint provides forward deployment engineers who embed with your team to get you live faster. Learn more by contacting your account manager.
