crossmint

Onramp

Let your users buy stablecoins with Apple/Google Pay or cards in 160+ countries without leaving your app.

Onramps are Crossmint's fiat-to-stablecoin rails, letting your users fund their wallets with Apple Pay, Google Pay, or cards and receive stablecoins directly, with no redirect and no third-party checkout.

Crossmint APIs are built to be chain-agnostic and accessible to developers without blockchain expertise, so onramps can be live in days rather than quarters.

Key Capabilities

- **One-tap funding**. Apple Pay and Google Pay natively, with card entry for users who prefer it.
- **160+ countries, one integration**. Global coverage without a market-by-market build.
- **Progressive KYC**. No documents or selfies for transactions under $1k.
- **Embedded or headless**. Take the pieces you want, use your own UI for the rest.
- **Direct-to-wallet settlement**. USDC and USDT across most EVM chains, Solana, and Stellar. Other stablecoins on request.
- **Disputes handled**. Crossmint manages disputes and assumes chargeback liability on card transactions (within limits).

What Makes Crossmint Onramp Unique

Best-in-class UX

Embedded, headless, or piece by piece. Funds land straight in the user's wallet, with no address to copy.

Full compliance rails

MiCA CASP and PSD2 Payment Institution. KYC, AML, sanctions, wallet screening, and Travel Rule handled.

4+ years of experience

The onramp runs on the same backend and fraud model as Crossmint Checkout, behind Robinhood Wallet.

Supported Regions

NORTH AMERICA

US (excluding CA, NY, TX, CO, TN)

EUROPE & INTERNATIONAL

EU Member States, select LATAM, Africa, and APAC regions.

Trusted By Global Fintechs & Crypto Firms

MoneyGram · Western Union · fomo · VISA · Jupiter · wirex
