# Why Spectrum?

## The Challenge

Applications within an ecosystem struggle to access high quality infrastructure

- **Testnet → Mainnet transition is painful**
  - Teams often build on unreliable public infrastructure and struggle to maintain performance at mainnet scale.
- **Faucet access is cumbersome**
  - Project foundation and team have little visibility on infrastructure usage

## The Spectrum Solution

Built by **Simply Staking**, Spectrum removes operational friction with globally distributed, auto-scaling infrastructure and developer-first APIs.

Move from testnet to mainnet in one click.  
No maintenance required.

## Why Teams Choose Spectrum

- **99.999%** API success rate
- **Global** coverage and auto-scaling infrastructure
- **200+** networks supported
- **SOC 2** Attestation
- **Seamless** transition from testnet to mainnet
- **Dedicated** enterprise support & uptime guarantees
- Operates across multiple Tier-3 data centers around the globe
- No reliance on cloud provider, for better decentralisation

## Trusted by the Industry's Best

Spectrum powers leading ecosystems including **Chainlink, Polkadot, Monad, Berachain, Fuel Network, Oasis, Agoric** and many more.

# Product Snapshot

## A powerful platform built for builders

- Intuitive dashboard with real-time analytics
- High-performance RPC and full node endpoints
- Custom configurations (full, archive, dedicated)
- Simple subscription or pay-as-you-go pricing

The dashboard features a top navigation bar with a profile icon, name 'JohnDoe', and a notification bell. A sidebar on the left contains menu items: Home, Endpoints, Nodes, API, Metrics, Faucet, Tickets, and Admin. The main content area is titled 'Home' and includes several key components:

- Summary Cards:** Total requests (1,365,987), Top chain (reqs) (Hyperliquid), and Top Project (300,157 Nukedrop).
- Subscription Model:** A 'Developer' plan for 2.75 M API Credits (equivalent to ~500k Requests) with a billing cycle and a renewal date of October 28, 2025. Usage data syncing is at 0%.
- Upgrade Banner:** Promotes 'Get a lot more' with benefits like superior rate limits and priority support.
- Plan Benefits (Business):** Lists features such as production-grade performance, 200 reqs/sec API, 750M credits/month, and access to all networks.
- Nodes API:** Offers fast, secure, and scalable multi-chain connectivity for dApps.
- Request a Network:** A form to request a specific network if not found in the current selection.
- Latest Updates:** A section with three featured articles: 'How Spectrum Builds Scalable RPC Infrastructure for Web3 Applications', 'Spectrum Under The Hood: The Infrastructure Behind the Nodes', and '5 RPC Metrics That Matter When Choosing an RPC Provider'.
- Hyperliquid Promotion:** A card for 'New networks Hyperliquid' describing it as a high-performance EVM platform.
- Spectrum Faucet:** A card encouraging users to claim free Spectrum credits.
- Docs & Socials:** Quick links to documentation (Getting started, Service plans, Pricing, Supported chains, Developer guides) and social media profiles (Twitter, LinkedIn, Telegram, Website, Email).

### Step by step

**Post to Blockchain**  
Execute the transaction and boost. Win!

Step 1: **Follow**  
Click on the network you want to follow.

Step 2: **Post**  
Copy the transaction hash and paste it into the "Just dev" field.

Step 3: **Confirm**  
After the transaction is verified, you will receive a tweet.

# Foundation Tier

For protocols that power ecosystems.

The Foundation Tier offers high-performance, dedicated RPC infrastructure for protocols that want to support their builders and communities directly.

## Why it matters

Empower your ecosystem with reliable RPC endpoints, gain insight into your developer base, and keep critical infrastructure running smoothly and easily scale when it matters.

 Tier 1	Up to 1TB per archive node 2 Mainnet + 2 Testnet	 Tier 3	5TB per archive node 2 Mainnet + 2 Testnet
 Tier 2	2TB per archive node 2 Mainnet + 2 Testnet	 Custom	Fully customisable configuration
<ul style="list-style-type: none"><li>✓ 24/7 custom support requirements</li><li>✓ Extensive faucet support</li><li>✓ Dedicated technical account manager</li><li>✓ Volume discounts</li><li>✓ Dedicated infrastructure</li><li>✓ Customisable hosting regions</li><li>✓ Access to our Teams Feature</li></ul>			

## Highlights

- Exclusive, dedicated project infrastructure to ecosystem builders
- 1-hour SLA for support
- Whitelisting system for approved developer access
- Insight for foundations on the top users, requests and methods within their ecosystem
- Unlimited RPS with no rate limiting
- Sponsored Node visibility on the Spectrum dashboard
- Custom node configurations (mainnet, testnet, archive)
- Full access for foundation team to Spectrum Enterprise tier infrastructure

# Proof & Scale

## Battle-tested and trusted at scale

- 2B+ RPC requests per day
- 200+ supported networks
- 99.999% uptime
- Enterprise-grade security
- Infrastructure operated from Malta, NL, and CA

# Pricing & Plans

Simple, flexible, transparent.

- Subscription tiers for predictable monthly costs
- Enterprise plans for high-volume projects
- Custom node configurations available
- Coming soon: integrated credit, debit, and crypto payments

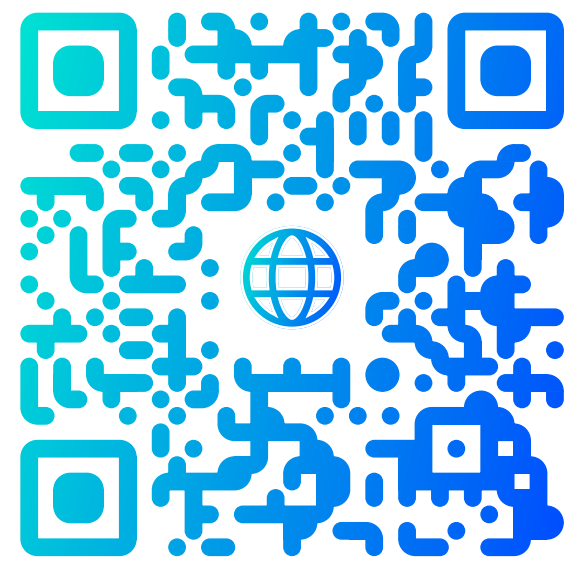

## Pricing That **Grows With You**

Transparent, usage-based pricing designed for builders at every stage.

Features	Free	Growth	Enterprise	Enterprise	Custom
Price / Month	\$0	\$35	\$150	\$500	Contact us
Requests / Sec	25	50	200	350	Custom
Credits / Month	10M	245M	1.15B	4.2B	Custom
Networks	3	All	All	All	All
Additional 10M Credits	-	\$1.60	\$1.50	\$1.30	Custom
Support	Standard	Standard	Priority	Priority	24/7
Infrastructure	Private	Private	Private	Private	Dedicated
Failover	Standard	Multi-region	Multi-region	Multi-region	Multi-region
