

GUIDE

Pay WooCommerce affiliates with Stripe in 5 steps

With WooCommerce Affiliates and Stripe Connect, approved commissions go straight to each affiliate's bank account. Stripe handles identity checks, bank details and compliance.

1 Enable Stripe Connect

Turn on Connect in your Stripe dashboard and complete the Connect platform profile. Stripe will not create affiliate accounts until it is saved.

2 Get a restricted API key

Install **Affiliate Payouts by DevDiggers** from the Stripe App Marketplace and copy its `rk_` key. To let affiliates create their own Stripe account from your store, create a restricted key yourself with Balance Read and Connect Accounts, Account Links, Login Links and Transfers Write.

3 Paste the key and test

In WordPress go to DevDiggers Plugins, Affiliates, Configuration, Payouts. Paste the key under Stripe Connect, press Test connection, then tick Enable Stripe Connect Payouts and the Stripe Connect withdrawal method.

4 Ask affiliates to connect

Each affiliate opens Settings, Withdrawal Info on their dashboard and presses Connect with Stripe. Stripe collects their identity and bank details directly, so your store never holds them.

5 Send a payout

Set a pending payout to Completed. The plugin sends a Stripe transfer and records the reference. Moving a completed payout back out of Completed reverses the transfer.

Why a restricted key

Stripe asks plugins to use restricted keys. They limit what a leaked key could do, and a key starting with `rk_test` runs the whole setup in test mode first.
