

COMPLETE FIELD VISIBILITY, LESS OPERATIONAL BURDEN

Turner Columbus Reaches 95% Field Reporting Compliance in Four Weeks

On a \$1B hyperscale data center campus, Unbane helps Turner capture complete, structured field data from trade partners in under two minutes a day.

OVERVIEW

COMPANY

- Turner Construction Company
- Largest U.S. general contractor
- > \$38 billion annual construction value

PROJECT

- Hyperscale data center campus
- \$1 billion construction value
- 500 acres

AT A GLANCE

95% Compliance Achieved
in less than four weeks

<2 min Daily Reporting Time
per foreman, per shift

(91%) Less Review Time
for supers, from 60 to 5 min/day

THE CHALLENGE

On a project with dozens of trade partners on site, Production Tracking is critical. When daily logs are missing or incomplete, superintendents and project engineers spend their time chasing data instead of managing the build. The reports that do arrive are often delayed and filled in from memory, and the quality is inconsistent.

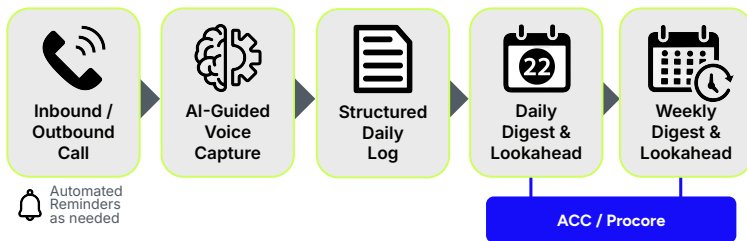

The construction industry is known for not adopting technology quickly, and for good reason: the technology is rarely designed for field operations. Filling out digital forms requires device access, dedicated admin time, and an average of 30–45 minutes of total reporting per foreman per day across multiple companies. At the end of a 10-hour shift, it is usually the first thing to fall off.

That's schedule exposure and liability risk that compounds with every undocumented shift.

"...Construction relies on documentation, but the software isn't user-friendly for field ops. They do their day job and then come back to a computer to try to relive the day. They're tired, and they shorthand it. That's not a good way to collect crucial information..."

— Kevin W., Innovation Team Member and VDC Senior Manager Columbus, Turner

This project was chosen as a structured first engagement to quickly prove value, tailor the workflow to Turner, and create a repeatable model for expansion. Once the enterprise security review was completed, the field team rollout took less than two weeks. No software to install or training required.

Each foreman calls in at the end of their shift. If they forget, Unbane calls them. In under two minutes, an AI-guided conversation captures work completed, crew count and hours, issues, and what's coming next.

Unbane turns those calls into structured reports routed to the right people. Foremen get a summary of their own log. Superintendents get a Daily Digest and Lookahead across all participating foremen, ready to review, add context, and sign off. The Weekly Digest gives an integrated view of all jobsite activity, along with a compliance grid of who submitted each day. All reports route directly into Autodesk Construction Cloud (ACC) and Procore.

[illegible]

THE RESULTS

RESULT	IMPACT
95% field reporting compliance	Complete daily visibility
Reporting time: 30-45 min → <2 min/day	3.5 hours back per foreman per week
Automated follow-up on missing logs	Less chasing and fewer gaps
Daily and weekly digests	Visibility without manual assembly
Review time: 60 min → <5 min/day	4.5 hrs back per super per week
Direct ACC/Procore integration	No disruption to existing systems

The shift was immediate, with an unexpected benefit: foremen began forwarding the Unbane daily summary to their own company's superintendent. A tool designed to serve the GC created direct value for field teams. With consistent end-of-day capture, information quality improved as well. The result is a more complete project record, as well as a faster one.

"...95% adoption on new construction technology almost never happens. But Unbane isn't asking people to do something new, it's meeting them where they are. What used to take five minutes per entry now takes 30 seconds. Multiply that across millions of forms a year — that's big value..."

— Kevin W., Innovation Team Member and VDC Senior Manager Columbus, Turner

With Unbane, You Get
Jobsite Information That Is:

Complete

Timely

Structured

Visible

WHAT'S NEXT

The initial phase was designed to prove value and create a repeatable model. Expansion is already underway on three fronts.

Jobsite

**8-12 Superintendents,
5-10 Foremen Each**

Scaling to 8-12 superintendents, each with 5-10 foremen. A complete, structured field record across dozens of foremen, every day.

Safety

**Real-Time Safety
Observations**

Calls happen while inspectors walk the site. 15 minutes is now 30 seconds. More observations and faster routing = faster closeout and safer jobsites.

Portfolio

**Four Rapid Deployment
Data Centers**

Rolling out to four rapid deployment data centers across three states, with approximately \$1 billion in total project value.

Bring Unbane to your Next Project

Missed communication and coordination gaps on the jobsite are the leading indicators of unnecessary rework and margin erosion. Unbane is built to address both.

Unburden your field team today

How it works

- ✓ No software to install, no training required
- ✓ Meets the field team where they are, their phone
- ✓ Captures data in the moment, not from memory
- ✓ Integrates directly into ACC and Procore
- ✓ Live in under two weeks
