

Autodesk integrated.

Project management isn't complete without safety. With Breadcrumb's two-way integration, all safety information automatically flows into the right Autodesk Forma folders, eliminating duplicate data entry and keeping project records accurate and compliant in one place.

One source of truth, no double-entry.

Safety records and team data flow automatically between Breadcrumb and Autodesk Forma. Your team works from one up-to-date set of numbers, without re-entering the same information across two systems.

Real-time view of labour and productivity.

Actual site attendance lands in Autodesk Forma as it happens. Compare scheduled against actual labour at a glance, and get a much sharper read on productivity by project.

Automated attendance.

Breadcrumb captures all site attendance and automatically translates it into Manpower Hours in your Autodesk Forms.
