

Never miss a deadline with new and enhanced scheduling integrations

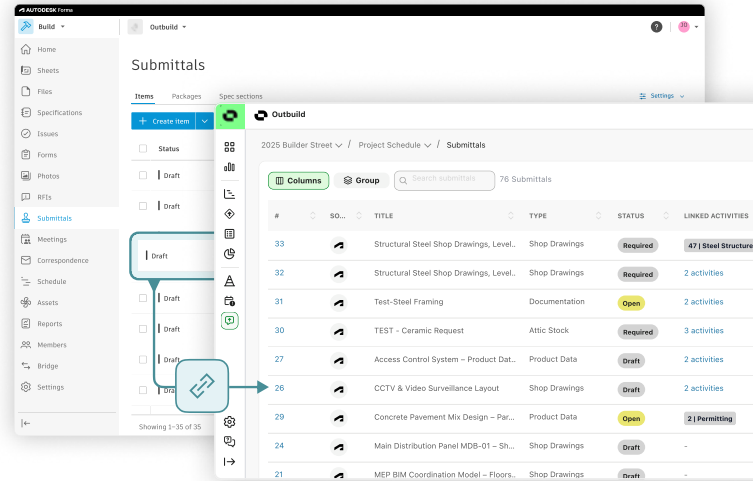

Autodesk Forma + Outbuild integration connects critical project documentation to your schedule activities and daily tasks.

**No more manual updates across spreadsheets and systems.**

**Connect Submittals from Autodesk to Schedule Activities**

Tracking submittals across platforms gives teams clear, early visibility into approvals and materials across the project.

- Submittals created in Autodesk can be pushed to Outbuild, connecting critical project context to schedule activities, durations and dates.
- Link each submittal to one or more Outbuild schedule activities to drive planned submission and approval dates automatically from the required on-site date.
- Sync status updates bidirectionally throughout the submittal lifecycle.

**Autodesk RFIs are captured in Outbuild as Roadblocks**

See what's blocked, what's impacted, and what needs to happen next - in one place.

- RFIs created in Autodesk are automatically imported into Outbuild as Roadblocks so they are visible on the schedule.
- Associate each RFI with a specific Lookahead task to manage its lifecycle directly in Outbuild.
- Status changes sync back to Autodesk in real time, keeping field tasks and their blockers tightly connected across both platforms.

**Link drawings in Autodesk directly to Outbuild Lookahead tasks**

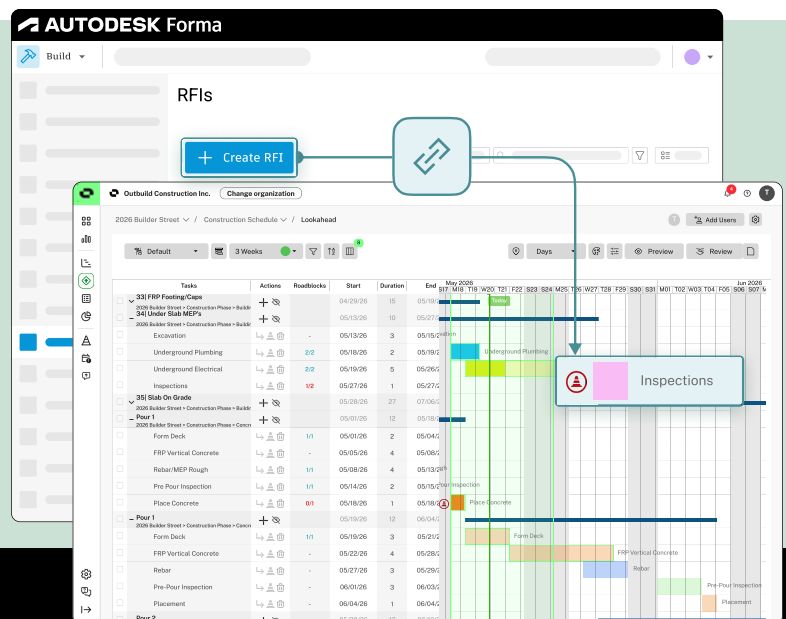

Ensure the latest drawings are where the work is happening, and avoid costly rework.

- Keep drawings up-to-date across platforms and visible in the field.
- Drawings and sheets can be tied to Outbuild Lookahead Tasks which are accessible in the field.
- Linked drawings are accessible in the task's detail and visually indicated in schedule views, keeping drawing references close to the work being planned.

WHAT OUR CUSTOMERS SAY

“The Roadblocks feature gives our team a clear view of what's blocking progress so we can resolve issues faster and keep the schedule moving”

Dan Moyer  
SUPERINTENDENT | CATAMOUNT

# The Scheduling Intelligence Platform for Construction

## Scheduling was just the beginning.

Outbuild connects the field, the office, and leadership around a single source of truth — and uses AI to help teams act before problems hit.

### WHY CHOOSE OUTBUILD?

#### Master Scheduling

Full CPM scheduling — Gantt, critical path, Baseline Management, drag-and-drop dependencies. The schedule is the single source of truth.

#### Schedule Impact Requests

When field conditions change, crews submit a Schedule Impact Request tied directly to the activity. The impact is visible before approval — no email chains, no Monday catch-ups.

#### Roadblocks

Field teams log blockers tied to specific schedule activities. The right person gets notified before a day turns into a week.

#### Executive Dashboard

Portfolio-wide visibility — schedule health, PPC, PRR, trade partner performance, Roadblocks, and SIRs — without a single status meeting.

#### Lookahead Planning

Break schedule activities into tasks, assign them to trade partners, and commit Weekly Work Plans — built on Last Planner methodology.

#### Connected Field

The Outbuild Mobile App and iPad App bring the schedule to the jobsite. Supers update progress, log Roadblocks, and submit Schedule Impact Requests in real time.

#### Outbuild AI

Ask plain-language questions. Get answers grounded in your actual project data. Turns the schedule into a live intelligence layer for the whole team.

### WHAT OUR CUSTOMERS SAY

“Outbuild's AI Assistant goes beyond surfacing data. For Russell's leadership, **it delivers real-time clarity on what matters most across our entire portfolio in seconds**, enabling stronger project support while keeping teams moving forward.”

Robert Grzyb
