MultiPick®
Warehouse Management Software

One platform across your warehouse.

RECEIVING & PUTAWAY

Receipt incoming purchase orders as stock arrives, with directed putaway, allocation and replenishment helping keep inventory where it needs to be.

RF & VOICE PICKING

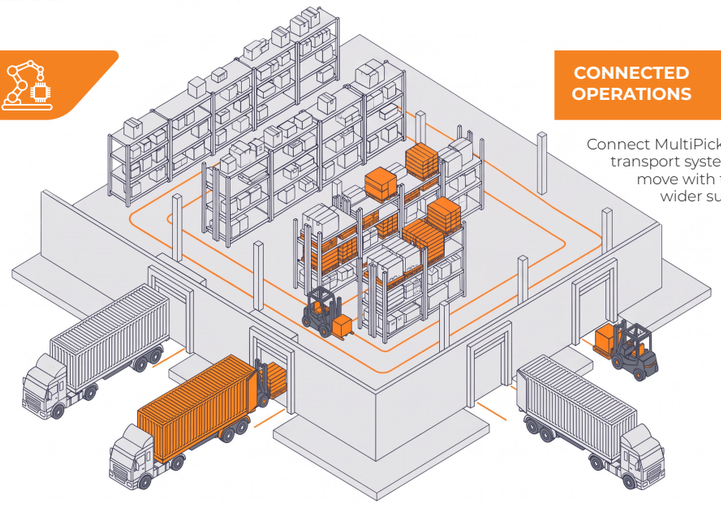

RF-enabled picking creates clear workflows for warehouse teams while reducing reliance on manual, paper-based processes.

INVENTORY & REPLENISHMENT

Maintain inventory visibility and replenish pick locations as stock moves through the warehouse.

WAREHOUSE AUTOMATION

As operational requirements evolve, MultiPick can form the foundation for increasingly sophisticated automation, connecting warehouse software, people and automated systems through one platform.

CONNECTED OPERATIONS

Connect MultiPick with ERP, courier and transport systems so information can move with the order through the wider supply chain.

WAREHOUSE EXECUTION

Coordinate warehouse operations in real time.

WAREHOUSE ORCHESTRATION

Connect software, people and automation through one platform.

BUILT FOR NEW ZEALAND LOGISTICS

Interlogic combines warehouse technology with more than two decades of local logistics expertise and a deep understanding of the New Zealand supply-chain environment — including MPI, port, supermarket supply-chain and carrier/courier integration.

Unlike a one-size-fits-all global platform, Interlogic designs solutions around the operation, supports implementation hands-on and stays involved as requirements evolve.

interlogic®
Intelligent Warehouse Solutions

From RF to Robot. One Platform.

MultiPick® is Interlogic's warehouse management software, designed to manage and optimise warehouse operations from receiving and putaway through to picking and dispatch.

THE AUTOMATION JOURNEY

Built to evolve alongside the businesses that use it, MultiPick provides the foundation for efficient day-to-day warehouse management while giving operations a pathway from core RF workflows through to sophisticated automation — without having to replace the underlying system as requirements change.

START WHERE YOU ARE. SCALE AS YOU GROW.

Whether the immediate requirement is better control of core warehouse processes or a pathway into greater levels of automation, MultiPick provides a scalable platform that can grow with the operation.

MULTIPICK STANDARD	MULTIPICK ENTERPRISE
▪ Best for growing businesses that have outgrown their current setup. ▪ Up to 50 users, 2+ warehouses. ▪ Adds automation: smart putaway, advanced picking functions, cross dock, auto replenishment. ▪ Integrations: ERP Host APIMPI and Voice integration.	▪ Best for large, complex, or multi-site operations. ▪ Unlimited users, unlimited warehouses. ▪ Advanced automation: pick-to-light, ASRS, advanced release scheduling. ▪ Full integration suite: ERP host API, courier, MPI, Port Connect, custom builds.

CUSTOMER STORY

CARDINAL & MULTIPICK®

The WMS Behind NZ's First Automated 3PL Warehouse

A Food & Grocery 3PL — set out to bring proven global automation home. The result is 'Perfect Pallet': a major pallet facility, with goods-to-person picking and 400% lift in order-processing speed and accuracy.

"Interlogic are a deep and intimate partner — guys that are prepared to jump on the trucks, jump in the forklifts, and walk with us alongside the robots so they walk in our shoes."

Brendon Furness
CEO, Cardinal Logistics

FEATURES

MULTIPICK® WMS. WAREHOUSE CONTROL THAT SCALES WITH YOU.

From small teams to enterprise operations, MultiPick grows with your business, giving you confidence, visibility, and measurable ROI from day one.

MultiPick is the flagship warehouse management system. It's proven to deliver efficiency, accuracy, and visibility across every role in your warehouse, from forklift operators on the floor to managers in the office.

Unlike one-size-fits-all platforms, MultiPick is modular. You can start small, then add functionality as your business grows, without switching systems.

VOICE DIRECTED PICKING

Transform your existing Honeywell handheld or vehicle-mounted computer into a powerful voice-directed picking solution, without investing in separate voice-only hardware.

By simply adding headsets and the necessary software licenses, MultiPick® Warehouse management system can enable voice-directed workflows using the devices already in use. This eliminates the need for costly dedicated voice terminals, making voice picking a highly cost-effective and scalable upgrade for your operation.

CUSTOMISABLE BUILDS & INTEGRATIONS

Not every warehouse runs the same way, and that's the point. MultiPick's configurability/flexibility and integration capability enables seamless integration into couriers, ERPs, and automation systems.

From core RF workflows through to sophisticated automation, MultiPick scales with your operation.
