

Standard Posit Deployment (SPD)

posit™

Jumping
Rivers

What is SPD?

Standard Posit Deployment 'SPD' provides a rapid method for securely deploying all Posit products, while ensuring best practices are met.

Jumping Rivers has been a Posit Full-Service-Partner for over eight years and has years of experience designing, deploying and supporting Posit environments.

Who is this service for?

- Organisations that need fast deployment of team or single products
- Clients who want to entrust JR with future management tasks to avoid the responsibility of maintaining and supporting the environment
- Client's that lack the expertise to deploy Posit
- Typically small and medium data teams

What happens post-deployment?

We can manage the system with maintenance and quarterly updates, or clients can choose self-support or our ad-hoc third-line support via video calls and email.

SPD is unsuitable for teams that want:

- Redundancy (High Availability and Fault Tolerance)
- Kubernetes
- Typically enterprise customers (large scale)

Should the above be required, we have a three phase deployment option for more complex deployments.
