Founded in 2007

For more than fifteen years we've been a leader in the cloud business intelligence space with a focus on connecting to other SaaS products and enabling users to create custom reports to answer their key business questions.

What We Do

Easy Insight is a cloud based business intelligence product, enabling you to create reports and dashboards on and across the different systems in your business. Whether you need simple tables or dashboards combining a wide range of charts and maps, you can create the visualizations you need, all at an affordable price point. Drill into data to find the actionable information underlying charts. Set up delivery of reports as recurring emails to your users. Create custom calculations to automate what you're doing with Excel formulas on manually maintained spreadsheets.

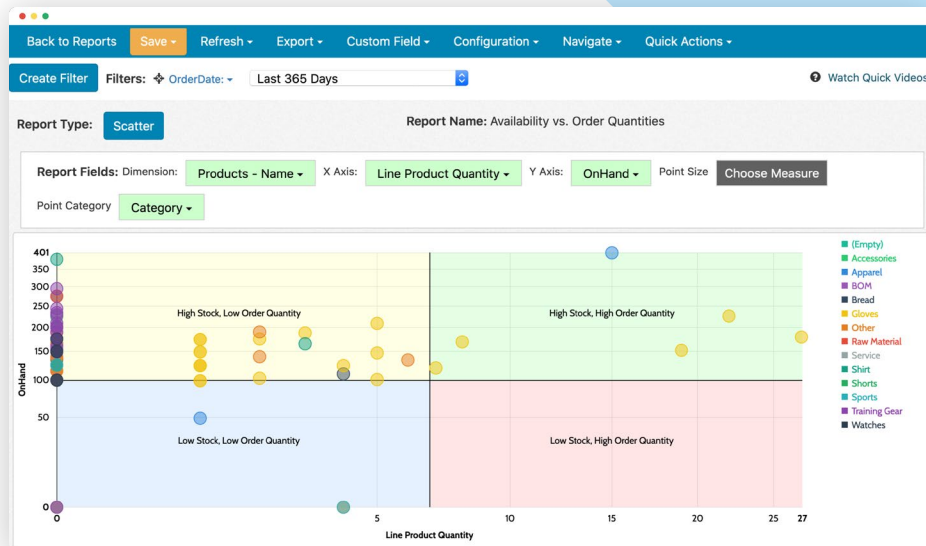

Easy Setup

Connect your data in a few clicks and start using prebuilt dashboards as soon as data loads. Our onboarding team can help you customize reports on a quick call and replace your clunky, time intensive manual spreadsheets.

Take your Cin7 to the next level with Easy Insight

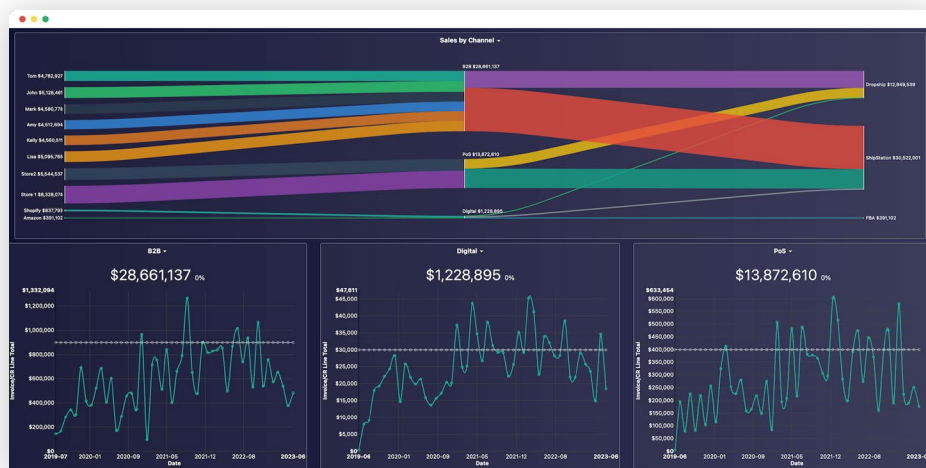

Custom Reports

Whether you use Cin7 Core or Omni, Easy Insight pulls over all of your Cin7 data to help you create the custom reports you need. Your sales, purchases, stock, or manufacturing data is all there for you. Seamlessly create reports that combine sales with stock values.

Maximize your profit

Easy Insight gives you numerous tools to optimize profitability. Analyze your gross profit out of Cin7 based on anything you want, from SKU to order to product category to brand. Integrate shipping data from your shipping system to get freight costs. Integrate your e-commerce channels such as Amazon, Shopify, Faire, or Takealot to get channel fees and understand how much it's costing you to sell on each platform. Add in variable accounting costs from your Xero or QuickBooks Online to get a full financial view.

Prebuilt templates to accelerate success

A prebuilt dashboard provides you with a huge range of reports to get started right away. Optimize your sales performance with sales reports. Improve warehouse efficiency with fulfillment reports. Track stock turns, sellthrough rate, and other key inventory metrics. Pull up point in time inventory levels to help with accounting.

Boost your new Cin7 implementation

Are you just starting with Cin7? Add your historical data into Easy Insight from your previous spreadsheets or other legacy data. The historical data is seamlessly pulled into reports along with your ongoing Cin7 data so that you can maintain accurate trend analysis, product velocity, and customer history. Use validation reports to make sure everything is in sync and healthy between your Cin7 implementation and the rest of your business with comparisons on inventory counts, product prices, and accounting values.
