

OpenAsset Integration Data Sheet

Summary

This document covers the key details of the integration between OpenAsset and Knowledge Portal. Data flow is one directional, Albums / Images can be pulled into Knowledge Portal from OpenAsset but cannot be pushed into OpenAsset.

Please note that OpenAsset cloud version is required.

Integration

User Accounts and Roles

All users must have accounts in both Knowledge Portal and OpenAsset.

Please note that Knowledge Portal will not inherit any user roles (such as admin rights) from OpenAsset. Rights specific to Knowledge Portal are allocated in the Knowledge Portal admin pages.

Access Permissions

Knowledge Portal would require single user credentials (Username and Password) to access OpenAsset via the API.

Data Synchronization

Knowledge Portal will retrieve Albums / Images from OpenAsset API. There will usually be a delay of up to 30 minutes for any new or amended images to be reflected in Knowledge Portal.

Default Data Mapping

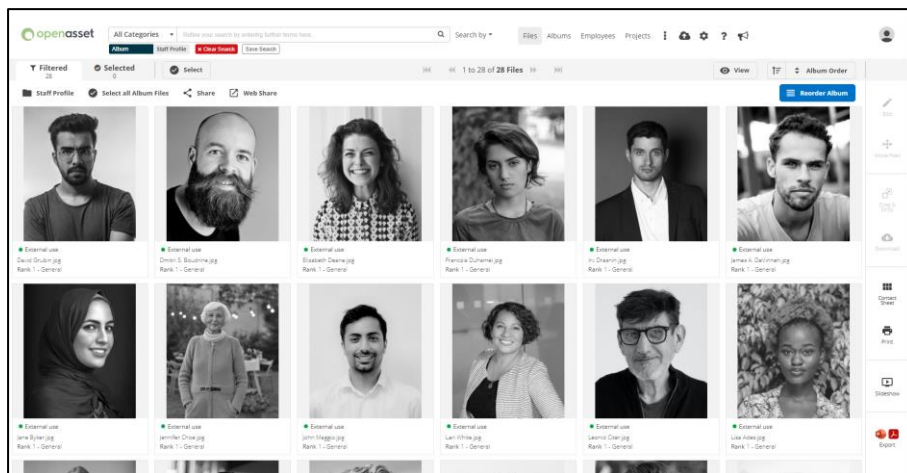

We will bring the following Albums / Images across from your OpenAsset database for display in Knowledge Portal. Clicking on an image in Knowledge Portal will load the asset within OpenAsset.

Staff Images

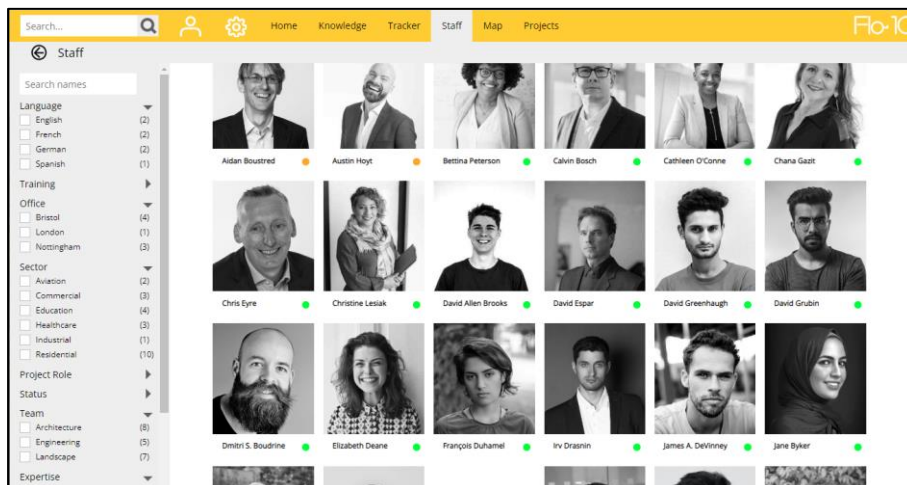

We will pull the staff profile images from OpenAsset into Knowledge Portal for current staff only. OpenAsset Images are cross-referenced by email address and must belong to a single pre-specified OpenAsset Album / Category.

OpenAsset	Knowledge Portal
Custom Attribute 'Email'	User Email Address

OpenAsset Integration Data Sheet

OpenAsset

Knowledge Portal

Images within OpenAsset must have a custom attribute 'email' and the value must match the email address assigned against the user account within Knowledge Portal.

Project Album / Images

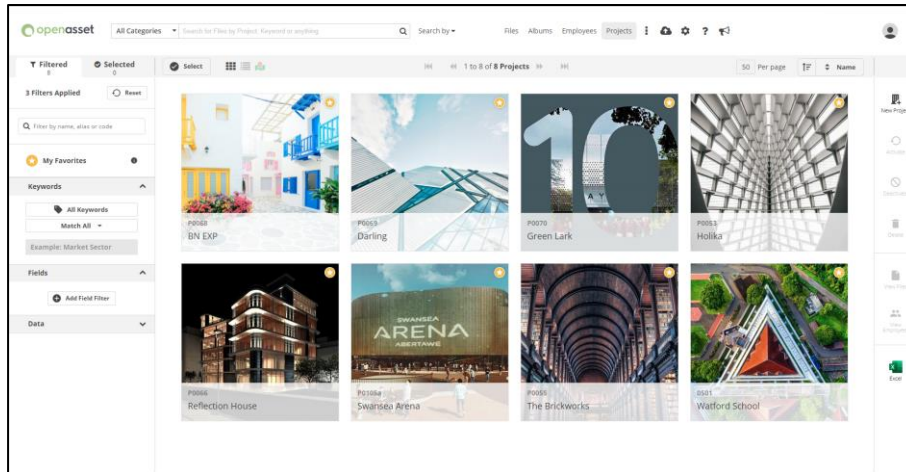

Knowledge Portal can display the images from an OpenAsset project album on the associated Knowledge Portal project page. OpenAsset Albums are cross-referenced based on the following criteria.

OpenAsset	Knowledge Portal
Code	Job Number

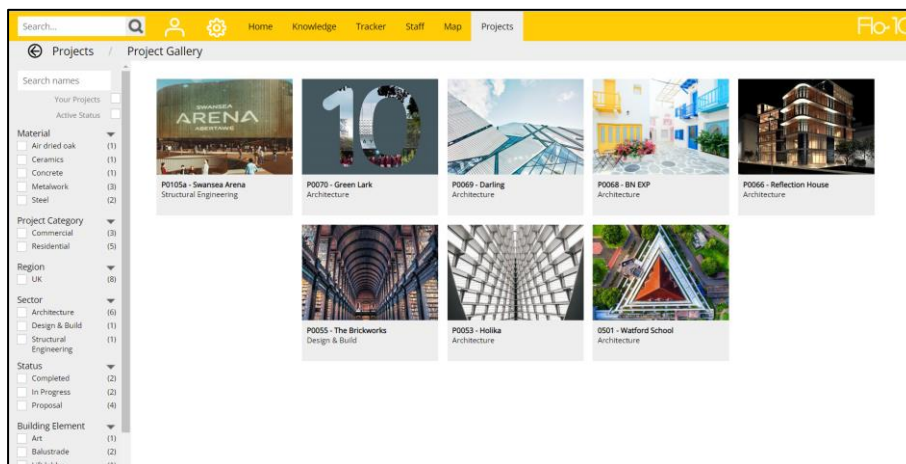

OpenAsset Album codes must be an exact match for the job number within Knowledge Portal. Albums are automatically synchronised on the creation of a new project. By default,

OpenAsset Integration Data Sheet

the hero image is the only synced image and will be the default displayed image. The remaining album images can be synchronised on request and displayed in a slideshow.

OpenAsset

Knowledge Portal

It is possible to customise what images are displayed within the album based on their OpenAsset ranking.

Project Image Keywords

It is possible for OpenAsset keywords to be mapped to Knowledge Portal tags and therefore make the images searchable. This would involve customisation and therefore please discuss with your Knowledge Portal project manager or implementation engineer.

OpenAsset Integration Data Sheet

General Albums / Images

Knowledge Portal can display the images from any OpenAsset album on any knowledge page. OpenAsset Albums can be identified by their album ID.

The OpenAsset panels can be displayed either in slide show or grid.
