

Making Zero-Day Close a Reality

Rillet is the AI-native ERP trusted by hypergrowth innovators and renowned public companies to automate the month-end close. Rillet is the first intelligent system of record built for speed and accuracy by automating revenue recognition, payroll entries, prepaid expenses, intercompany entries, and more with native integrations and AI-embedded workflows.

Key platform functionality

01 Autonomous Revenue & Expense Management

Automate complex deferred revenue and allocations under ASC 606. Rillet AI identifies and books prepaids, fixed assets, and accruals for continuous close. The platform instantly schedules future journal entries on contract upload and processes every expense for real-time spend analysis.

02 Real-Time Reporting

Rillet delivers institutional-grade financial statements by unifying GAAP and SaaS metrics directly from the general ledger, ensuring board decks and audit data match. Automated flux analysis and one-click drill-downs to sources allow teams to explain variances.

03 Multi-Entity & Multi-Currency Ready

Rillet offers real-time consolidation and automated intercompany eliminations. By handling currency revaluations and multi-dimensional tagging, Rillet lets global teams switch between subsidiary-level details and a consolidated parent view with a single click.

04 Native Integrations

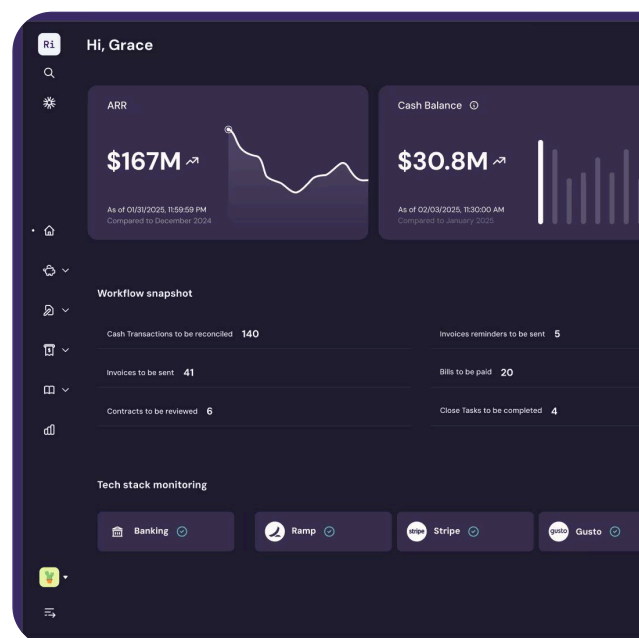

Unlock in-house, API-based integrations across CRM, Billing, AP, Tax, Payroll, and Banking that take five minutes or less to set up. Because these are built natively, Rillet maintains total control over data flow, pulling granular metadata to book journal entries automatically. This direct connectivity achieves a 99.999% reconciliation auto-match rate for Stripe transactions.

05 Close Management & Audit Readiness

Rillet streamlines the month-end close through integrated workflows with assigned owners and real-time status tracking. For data integrity, audit-ready workflows gate external and junior-level entries before they hit the general ledger.

Rillet excels at:

- Mid-market through enterprise
- Complex revenue models
- Multi-entity and multi-currency

CPA-Led Implementations

Rillet's in-house team of CPAs ensures a 6-week average implementation time and 100% success rate. We take it even further by closing your first month with you.

Controls & Compliance for Scale

Rillet enables public and IPO-ready companies to scale with complete audit trails and SOC 1 / SOC 2 permissions & controls.

AI Agents Trained on Real Accounting Data

Rillet AI agents are built for hyper-specific accounting workflows and trained on real-world data. They operate natively in platform, in collaboration with finance teams.
