

Push Project Images Directly from Procore into OpenAsset

The OpenAsset Procore Connector enables the seamless upload of images from Procore into your OpenAsset DAM, where images can be tagged with searchable keywords and shared across your organization. With the Connector, marketers can easily centralize all project images and data, helping streamline workflows and move more quickly..

Key Benefits:

Centralize All Project Images

Use Procore image tags, such as Date or custom Trades, to quickly find relevant photos needed for marketing deliverables.

Collaborate Onsite & Offsite

Construction field teams amass large volumes of images and video files on various projects. Marketing teams need the ability to access those files and select the best to showcase work. The integration allows marketing teams to streamline workflows by seamlessly providing access to project images stored in Procore.

Maximize Bidding Efficiency

You invest in the creation of your digital assets for a reason. They are the best way for you to showcase your projects, build your brand and win new business. OpenAsset streamlines workflows and helps you to create documents and collateral seamlessly.

The Connector Is Free

The Connector is free, at no extra cost, for existing Procore and OpenAsset users. Visit the [Procore Marketplace](#) to download.

"Everything about the database is useful and saves time. It has cut down the time to create everything from proposals, to brochures, to PowerPoint presentations. It's been a huge time-saving tool, and the ease of use made it a no-brainer for us."

— Mary Norton, Marketing Manager at Sundt Construction
