

Synthesis & OpenAsset Connection

Enrich your Intranet with OpenAsset Images for Projects and Employees

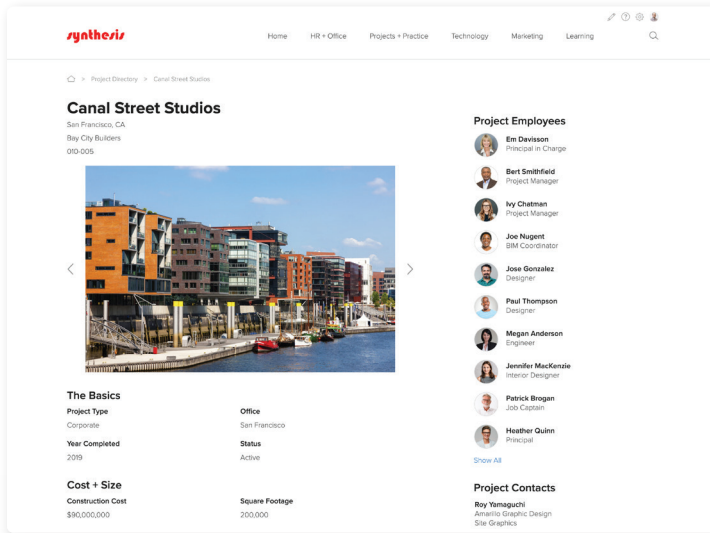

Synthesis, Knowledge Architecture's intranet platform for AEC firms, helps employees find the firm-specific information they need to be effective at work, know what is happening across their organization, and learn and grow with their colleagues.

Key Benefits:

Our users are seeking knowledge and eager to access information that will help them do their work more efficiently. The Synthesis - OpenAsset connection supports them by making critical images and data from OpenAsset available to them in Synthesis, including:

1. Auto-generated announcements about new OpenAsset project images
2. Project image carousels on Project Profiles
3. More complete project data and employee data on Project Profiles and Directories
4. Search for OpenAsset Project and Employee images within your intranet

How does the Integration work?

Project Images & Fields

- ✓ Display ranked OpenAsset project images in Project Directories, Project Profiles, New Image Feeds, Album Carousels, and Search
- ✓ Surface OpenAsset project data in Project Directories and Project Profiles

Employee Images & Fields

- ✓ Display OpenAsset employee images in Employee Directories and Employee Profiles
- ✓ Surface OpenAsset Employee Module field data on Employee Directories and Employee Profiles

Getting Started

Knowledge Architecture's client success team provides end-to-end support for the connection and configuration of this integration for all/any of our clients.

You can reach us at support@knowledge-architecture.com.
