

# Owlery: the TMS with an AI Teammate

Your team stops digging through systems and answering the same questions all day. Hootie handles it all from Slack, Teams, or email, grounded in your live Owlery data. Included with the platform.

@hootie tender Wednesday's Columbus orders per routing guide, use spot if within 12%

I found 18 open orders ready to tender to the following carriers. Confirm and I'll send them.

Powered by commercial LLMs that we have optimized for logistics. Your data is never used to train the model, and Hootie always confirms before taking action.

## It **acts**, not just answers your questions.

Tenders loads to contracted carriers, requests spot quotes, reaches out to carriers for ETA updates. Confirms before every action — your team stays in control.

## It **watches**, so nobody has to remember.

Standing instructions run continuously. Morning late-shipment summaries, delivery confirmations, exception alerts — delivered without anyone checking.

## It **answers**, so your team doesn't have to.

Anyone in the company — sales, CS, ops, leadership — can ask from a shared channel, direct chat, or email. No TMS seat, no training, no interrupting logistics.

Built in, not bolted on. Hootie runs on the same TMS as your team.

*How much did we spend on freight per pound out of Joliet last week?*

*Can you grab the POD for that Whole Foods PO from last October?*

*Tender all open Walmart orders ASAP and let me know when they shipped!*

*What's the status of those orders going to Twinstar Bakery?*

*How many cases are on each LTL load shipping today out of Chicago?*
